Welcome

Welcome to "Mundibulanga" for our 32nd on property bull sale. Our 2012 bull sale is very special to us for several reasons:

- This year is our first year where we have hit 'full production' with both a female and bull sale held within the same year and is what will become an annual event
- It is our largest offering ever of Raff Angus Bulls at auction on-property
- Over 85% of all lots selling are sired by Raff bred bulls.

This for us is the climax of a decision we made in 2006 to purchase the best cows at the final Hoff Scotch Cap dispersal sale in USA with a view of breeding a couple of sires for stud use. To date we have used over twenty resulting progeny as sires and this sale is represented by sixteen of them. These cattle have blended beautifully with ours maintaining our unique type for scale, length and structural integrity while adding a little more substance, depth, thickness and doing ability.

Our goal has always been to breed Angus with as much growth and yield as possible with the traditional Angus meat qualities and maternal attributes. We believe we now have a herd of cattle with growth and yield comparable to any breed or composite - and they are Pure Angus not a Black Composite or Black European.

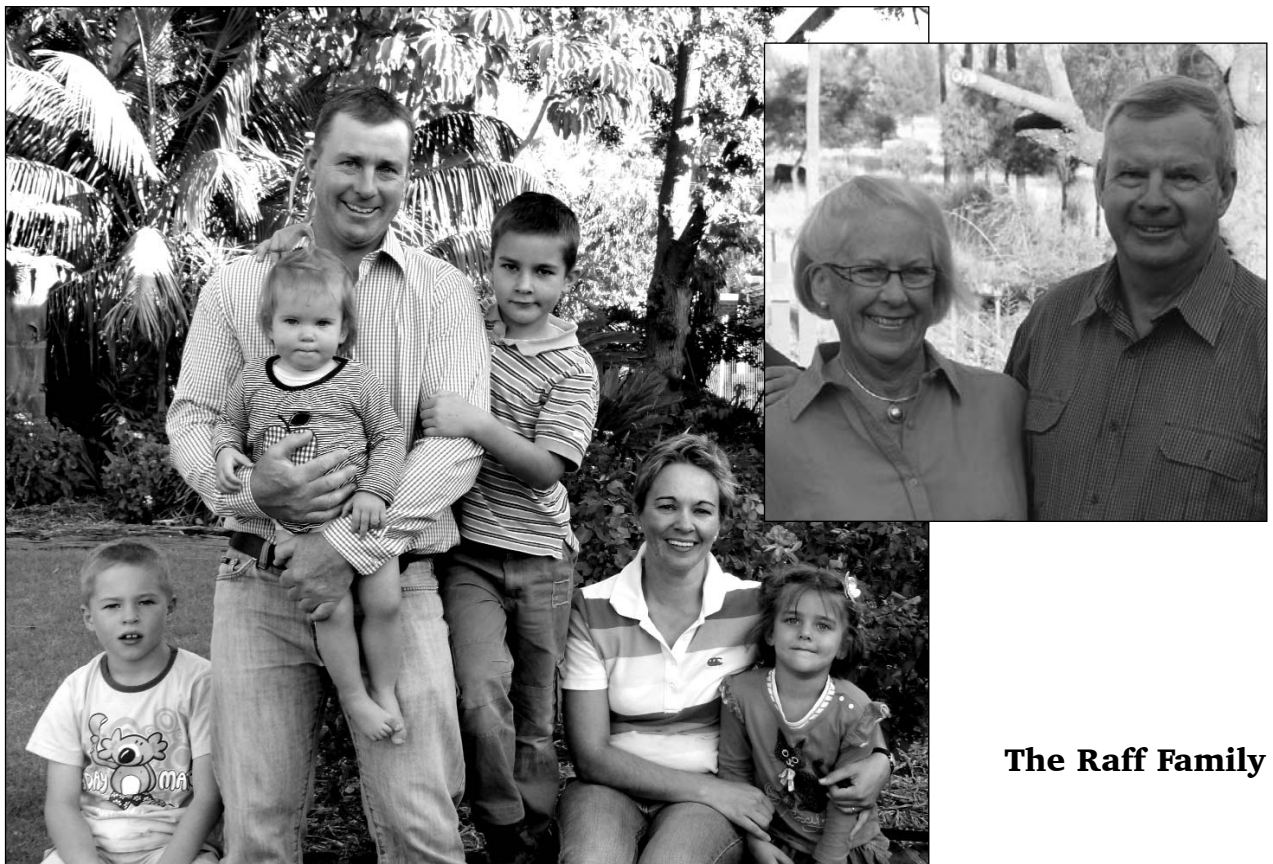

In 2010 we embarked on a three year 'take our cattle to the people' showing campaign. The 2012 Brisbane Exhibition was the climax of our campaign when we went out on a high winning the Interbreed Supreme Beef Female of the Show with Raff Blackbird D349. This follows our Interbreed Supreme Beef Exhibit of the Show win at the Melbourne Angus Feature show last year with Raff Empire E269. In the three years of showing we attended over thirty Country and Royal Shows across four states to win five Royal Show Grand Championships with four different animals- our teams of cattle clocked up over 25,000 km's on trucks whilst being shown.

We are now in our third year of using HD50K for genotype testing all our cattle and this year added another first for Raff Angus by having every sale bull whose sires have DNA profiles Sire Parent Verified by using the most advanced DNA procedure in the world.

The more we use science as a tool within our program the more we appreciate the need to remain focused on the commercial realities of arid beef production in Australia. It always has and always will be our goal to breed a herd of cows that can thrive, survive and reproduce - cows that have shape structure and capacity. Only then we use science to assist in making breeding decisions that focus on the important hard to measure traits. If you have a proper cow herd they will breed bulls.

- Bulls should look like bulls - big, powerful, athletic and masculine.
- Cows should look like cows - sweet, feminine, functional and fertile.

For 47 years we have remained focused on breeding a type of animal that our commercial clients want and what we believe to be the most profitable for breeders, feeders and processors. We feel humbled to know that our business has been entirely demand driven and are extremely grateful to our many loyal clients and friends who have given us the confidence and encouragement to 'be different' and to follow our conviction.

COMMISSION AND REBATES

5% commission will be paid to any agent:-

- Accompanying a client to the sale.
OR
- Attends the sale and purchases on a clients behalf
- Settling within seven days.

2% commission will be paid to any agent:-

- Introducing a purchaser to the vendor 48 hours prior to the sale but not accompanying the client to the sale.
- Settling within seven days

AGENTS PLEASE NOTE -

All introductions to be made to Andrew Raff:

Email raffangus@bigpond.com
Fax 07 4627 6293
Phone 07 4627 6064
Mobile 0429 691 975

SAVE TIME - PRE REGISTER

This year we have introduced the new

“PRE SALE DAY - BUYER REGISTRATION”

This will “save time” on the sale day, it will have all of your details correct and all you will do on sale day is walk up and collect your BID CARD.

It is very simple – go to www.gtsm.net.au

website and click on the “On line rego button”,
fill out the form and press send!

Cut off time is 10.00am Friday 21st September to pre sale register.

PLEASE NOTE: Registration on sale day is still available as normal.

SALE INFORMATION

Registration Status

All bulls are either **HBR** (Herd Book Registered) with a green tag or **APR** (Angus Performance Registered) with a yellow tag. Bulls with a white tag are imported Hoff embryo progeny.

Animal Identification

All bulls are freeze branded with the 'bench axe' symbol, year letter and number. A near side ear tag has the bulls ID, year letter and number. The off side ear has the bulls NLIS tag. Lot numbers will be paint branded on bulls on sale day.

Breeding Soundness Examination and Semen Test

All bulls have undergone a thorough examination by Dr Ced Wise to check their physical structure and breeding anatomy. All bulls have produced viable semen.

Health Treatments

Most bulls have received the following vaccinations: 7 in 1, 3 Day Sickness, Pestiguard, 3 Germ Blood, Vibrio and drenched with Cydectin Pour-on. Full vaccination details and treatment dates are listed at the beginning of each contemporary group within the catalogue and will again be detailed on the supplementary sheet.

Inspection

An 'Open Day' will be held at "Mundibulanga" on Sunday 23rd September when sale cattle can be inspected. There will also be groups of breeding cows and joining sires grouped for your inspection. Bulls may be inspected and is encouraged prior to the sale by arrangement with the vendors or their agent. Bulls will be penned ready for inspection from 9am on the morning of the sale.

Delivery

Bulls will be available for delivery immediately after the sale. "Mundibulanga" is in a tick free area and cattle are free to move interstate. Mick and Kathleen Moffatt will be handling all of the transport and deliveries. Home 07 46 658 154 / Mobile 0407 658 194

Refreshments

Lunch and refreshments will be available on sale day with the compliments of the Raff family.

Photos

Photos were taken six weeks prior to the sale. Due to the sheer workload involved in the compiling and timing of the catalogue the decision was made to not take photos of all lots this year. They have not been 'touched up' in any way.

AuctionsPlus - Raff Angus bull sale is interfaced with AuctionsPlus.

Auction prices at this sale are live online and will be interfaced with the physical auction. A computer is used to bring the real time "on property" prices to your Internet screen for those who have registered as AuctionPlus bidders to follow. Online bidders can place a bid on their computer and the result is immediately transferred to the person on property controlling the device - then on to the auctioneer. Bidding is only available to registered AuctionsPlus users. We recommend registering online as soon as possible if you wish to use the facility and become familiar with the sites operation. We have undertaken to use AuctionsPlus as an additional option - we will still operate phone bidding. It has been put in place in order to make it more convenient for our clients to secure their selected bulls.

You must register at least 24 hours prior to the sale on www.auctionsplus.com.au

Phone Bidding - 7 DAY MONEY BACK GUARANTEE.

Phone bidding facilities will be available on sale day. For those wishing to purchase bulls 'sight unseen' we are happy to assist with selections by offering an unbiased and honest assessment of the bulls. Those purchasing, that have discussed their selection with the vendor, are offered an unconditional money back guarantee if the purchaser is not satisfied with their purchase within seven days of taking delivery {purchaser will incur transport costs}. It is essential to make contact with the selling agent or the vendor prior to the sale to ensure that contact can be made on sale day.

SALE DAY PHONE NUMBERS

Landline - 0746 276 064

Andrew - 0429 691 975

David - 0447 376 033

DISCLAIMER

We pride ourselves on our upfront, honest and sometimes critical appraisal of our cattle. We are always happy to provide assistance to those seeking guidance and our opinion. However, the final decision will always be that of the potential purchaser. The partners of Raff Beef Cattle will not in any way be responsible for the final results and performance of any resulting purchases.

WHAT IS THE HD50K FOR ANGUS?

DNA technology in livestock has evolved dramatically in recent times as shown by the release in April 2010 of Pfizer Animal Genetics' first commercial DNA test using a high-density panel with more than 50,000 DNA markers for quantitative traits in black Angus cattle. Molecular Value Predictions (MVPs) are breeding values that predict the genetic potential of an animal based solely on its DNA. The HD 50K for Angus provides MVPs for 16 economically important traits including:

- **Calving:** (Calving Ease Direct#, Calving Ease Daughters#, Birth Weight#)
- **Fertility:** (Scrotal Size*)
- **Growth:** (Weaning Weight#, Milk#, Yearling Weight*, Mature Cow Weight*)
- **Feedlot:** (Dry Matter Intake‡, Feedlot Daily Gain‡, Net Feed Intake‡)
- **Carcase:** (Carcase Weight#, Rib Fat#, Eye Muscle Area#, Marbling#, Tenderness‡)

(# traits included in the BREEDPLAN analysis; *traits soon to be included; ‡ traits outside of BREEDPLAN)

As part of the monthly Angus Group BREEDPLAN run, breeders and bull buyers alike are getting a suite of the most advanced selection tools available for any breed anywhere in the world. The addition, since April 2011, of Pfizer's Molecular Value Predictions (MVPs) for 11 traits to the calculation of Angus Group BREEDPLAN EBVs has revolutionized the way that young animals can be selected increasing the rate of genetic gain for the Angus breed in Australia.

HOW WAS THE HD50K FOR ANGUS DEVELOPED AND VALIDATED?

The HD50K for Angus prediction equations were initially developed and validated in a data set with 5,100 genotyped Angus animals with phenotypes and genetic evaluation available for the traits offered. In addition, a significant number of Australian and New Zealand born high accuracy sires were then used to further calibrate these prediction equations. A proprietary strategy, developed by Pfizer Animal Genetics and reviewed by external scientific experts, was used to simultaneously develop the prediction equations for the HD50K for Angus and cross-validate on unrelated subsets of animals. Additionally, a further validation population was put together from a combination of high accuracy sires used in Australia and New Zealand. The MVPs were also supplied to AGBU (Animal Genetics and Breeding Unit) for an independent validation utilising extensive phenotypic data from these animals and their contemporaries and progeny.

KEY APPLICATIONS OF THE HD50K FOR ANGUS

Hard to measure traits

Many of the economically important traits are very difficult and expensive to measure. In addition, many of these traits are not part of the BREEDPLAN genetic evaluation system. HD50K for Angus can provide detailed information on the genetic worth of an individual for these key traits and can provide that information shortly after birth.

Net Feed Intake (NFI) is an increasingly important trait in today's beef industry. With feed being the number one expenditure in any beef cattle operation, and price of feed raising at an astonishing rate, the efficient use of this resource becomes more and more relevant in today's beef industry.

Tenderness has been ranked the most important contributing factor to eating quality by consumers. This trait can only be recorded once an animal has been slaughtered and this DNA test provides us with an objective indication of the genetic merit of an animal on this trait.

Maternal traits: To obtain high levels of accuracy for this group of traits, it will take several generations of recording. DNA came to the rescue and now allows us to obtain accurate information for these traits very early in life.

Replacement Animals

Replacement animals represent the future of the genetics of a herd, therefore to ensure the best possible selection decision are being made while selecting these animals, HD50K for Angus plays a very important role.

Replacement Heifers: There is little information available on the genetic merit of potential replacement heifers. As they haven't had a calf of their own yet, the only data available to predict their genetic merit is based on mid parent value information at best. The HD50K for Angus can provide a comprehensive picture of a candidate replacement heifers' genetic potential.

Donor Dams: Currently the way donor dams are selected, means that they are mature cows before enough is known about them to make a confident selection decision. By doing this, the generation interval of the entire herd increases, reducing the genetic improvement that could be achieved if heifers were selected as donors. The HD50K for Angus can provide the necessary information on young heifers and allow us to select them as donors with confidence.

Yearling/Herd Bulls: Selecting bulls as yearlings, for sale, own use, progeny testing, specific use (i.e. heifer bulls), is a mighty challenge as the information available at this point in their lives is restricted. The HD50K for Angus provides accurate information for economically important traits that will assist in this very crucial task to ensure the genetic improvement of a herd.

Animal Genetics

THE ROLE OF GENOMICS IN THE RAFF HERD

We are now in our third year of genomic testing using the HD50K for Angus product from Pfizer Animal Genetics.

By the end of this year we will have over 1,000 registered Angus bulls and females tested and MVP's (Molecular Value Predictions) for 16 traits

The reason we chose to invest in genomics was that we were frustrated with traditional genetic evaluation methods which failed to accurately describe our cattle.

The reasons for this are:

1. The genetic makeup of our herd is different to mainstream Angus in Australia which gave us poor linkage to 'popular' bulls which in turn gave our data a low accuracy.
2. Our northern environment and expansive management made it very difficult to maintain any consistency in nutrition in management groups.
3. Because of the systems heavy weighting on pedigree and the lack of variation in our raw data, our raw data is largely ignored by Breedplan.
4. In 2006 we purchased four stud cows in USA and imported 300 embryos from them. These cows were 'old' genetics and the bulls we used were 'old' genetics. As a result Breedplan had the resulting progeny at a very low EBV base which certainly did not reflect their true performance.
5. We believe there are many breeders who deliberately 'work' the current system to achieve 'good' outcomes.
6. We sell yearling bulls which makes it difficult to get data beyond 12 months on our male animals.
7. With a big percentage of ET calves born each year, with Breedplan it was difficult to identify the superior animals in a flush at a young age - when we need to retain or market.

WHY HD50K?

1. The information is all about the individual animal, not a mid parent estimate based on assumptions.
2. It describes the animal virtually at birth and that information is not subject to change over the life of the animal.
3. It is not affected by the environment and can not be manipulated by humans.
4. It provides valuable information on 'hard to measure traits' such as feed efficiency and tenderness.
5. It has the potential to eliminate some of the expensive and dangerous management practices in collecting data, like weighing calves at birth.
6. It eliminates the need to wait till the animal has progeny recorded to get accurate information.
7. As the system develops more valuable information will become available - without further testing.

HOW WE INTEND USING GENOMICS

We have always said that our preference is to use MVP's as a stand alone product. However our breed society and beef recording organisations have made it mandatory for the reporting of genomic information it has to be in the form of a GE-EBV. This means that we have been left with no option other than to present this information as genomic enhanced estimated breeding values to the public. By doing this Breedplan is failing to report important information on traits that it (Breedplan) does not measure that are available through MVP's, such as Feed Efficiency, Feed Lot Daily Gain & Tenderness

The system, as a stand alone product, suits our management, it reports on hard to measure traits, that Breedplan doesn't, which we feel are important and the information is available virtually at birth.

While MVP's are not yet perfect we have found them to be certainly no less accurate than EBV's. We do not intend to use MVP's as a marketing tool or to compare our cattle with other breeders. It will be used as stand alone information within our herd as a tool to describe our cattle so that we can fine tune our selection while acknowledging that every environment, every management and every market has a different requirement.

We have tested flush sibs at a young age and at maturity those MVP's largely reflect the subtle differences between flush sibs.

Within weeks of being born by simply taking a hair tail sample this calf will have genomic information on 16 traits including Feed Efficiency and Tenderness.

"We do not intend to chase the 'top 1%' in all traits but rather determine at what point is most sustainable for the various traits. First and foremost we must have a herd of cattle that can thrive, survive and reproduce in our environment. We then need to 'fine tune' that product to an efficient and sustainable animal that can breed animals that produce a body of beef that is profitable for the breeder, the grower, the feeder and the processor and gives an enjoyable eating experience to the consumer. MVP's provide a valuable tool to achieve this."
Andrew Raff

"MVP's are not a marketing tool. They are a tool to describe our cattle. Every environment, every management and every market has a different requirement."
Andrew Raff

REFERENCE JOINING SIRES

RAFF DISTINCTION D197
16/07/2008

RAFF DISTINCTION D197 must be considered one of our better bulls resulting from our USA embryo project. With so much power, substance, volume and capacity Distinction really is an amazing black beef bull. He is wide based with excellent feet and legs, has a long body and a strong spine with incredible width and depth of hindquarter. Like all Moriah sons he has a wonderful disposition. In our search for a modern sire to use on our Hoff cows we found Connealy Danny Boy. He was an aged bull when we inspected him and was not an extreme bull but one of the soundest and better made bulls with a pedigree full of proven genetics.

4 sons sell.

RAFF DAKOTA D85
20/04/2008

RAFF DAKOTA D85 is a massive 63 inch bull that is just so beautifully balanced and structurally correct. Contrary to his performance data Dakota is one of our most complete bulls. He is a bull that will make cows the right shape for them to thrive, survive and reproduce in any environment - his first daughters in production have magnificent shape to their udders and good milking qualities. While his dam Hoff Blackbird 5217 was not a prolific embryo producer her sons and daughters have been outstanding. Whilst he is a $\frac{3}{4}$ genetic brother to Limited Edition we have used him with great success back on Limited Edition daughters - his sons are real power bulls.

6 sons sell.

RAFF DALLAS D216
25/07/2008

RAFF DALLAS D216 was Senior and Grand Champion Angus in Brisbane in 2010 and Reserve Senior Champion at the Adelaide Angus Feature Show the same year. At both shows he had the highest growth and largest EMA of all breeds while boasting double digit fat scans and an IMF of 7.0%. Dallas is a large frame score bull with wonderful neck extension and shoulder who works the paddock with the greatest of ease. His daughters are special whilst his sons exhibit the exceptional length, growth and performance of their sire. His MVP's (Molecular Value Predictions) have him in the top 30% of the breed for Marbling.

9 sons sell.

REFERENCE JOINING SIRES

RAFF DEFENDER D218
26/07/2008

RAFF DEFENDER D218 is a flush brother to the \$21,000 and \$18,000 high selling bulls at our 2009 Bull Sale and to our stud sire Raff Distinction D197. He is beautiful bodied frame 7.6 bull with near perfect structure and kind disposition. He stamps his type on his progeny. They calve easily, have plenty of growth and are easy doing. Defender was sold to Paul and Faye Land in Victoria after three seasons in the Raff herd for \$14,000.

16 sons sell.

RAFF DYNAMITE D345
10/10/2008

RAFF DYNAMITE D345 sold to a partnership of Steve Hayward & Kellie Smith Qld and Corey and Prue Ireland NSW for \$18,000 at our 2011 sale. He is a magnificent beef bull that weighs heavy, has excellent skin type, extra bone, great capacity and overall balance. The performance data on Dynamite is exceptional being moderate for birth weight, explosive growth, adequate milk, big scrotal and EMA with massive carcass weight and retail beef yield - all the traits that make money. His progeny are all the high performance bulls in the sale. He and his brother Dazzler D353 are both full brothers to Raff Blackbird D349 - this years Brisbane Royal Show Interbreed Champion Female.

21 sons sell

RAFF DAZZLER D353
13/10/2008

RAFF DAZZLER D353 is a unique performance sire for raw data, EBV's and MVP's. He is a low birth weight bull with explosive growth, massive scrotal, carcass weight and eye muscle area. His MVP's have him in the top 9% for tenderness, excellent feed efficiency and better than breed average for marbling. Sired by Papa Equator from our great Hoff Blackbird 5217 Dazzler is a flush brother to Raff Dynamite D345 who sold for \$18,000 at our 2011 sale and tremendous brood cow Raff Blackbird D349. The sheer red meat capacity and fine skin type complement Dazzlers' performance. His progeny exhibit these qualities in abundance. Dazzler is now doing stud duties at Myanga Angus Stud NSW.

6 sons sell.

REFERENCE JOINING SIRES

RAFF DICTATOR D364
17/10/2008

RAFF DICTATOR D364 is a massive 64 inch son of Hoff Lady Durham by the old breed legend Leachman Prompter. His athleticism, carriage and little bit of arrogance - the way he prances around the paddock - has earned him the title 'the thoroughbred stallion'. His progeny have the extra neck extension, growth and lovely shoulder setting of their sire - his daughters should make wonderful cows.

10 sons sell.

RAFF DUKE D367
23/10/2008

RAFF DUKE D367 is a powerful, thick and deep bodied bull with a wonderful disposition. He is one of six sons of the great Hoff Moriah 822 that we have retained for stud sires. The Moriah progeny are all incredibly consistent - big and powerful with excellent structure, great feet and temperament. Duke's sire is Shady Brook Prime 251F who was regarded as one of the best GT Expo sons. Andrew and Anna regarded the Shady Brook Prime cows in the Hoff dispersal as the best sire group in the sale. The first progeny of Duke are impressive - all quality plus.

4 sons sell.

RAFF X-FACTOR X3
21/05/2002

RAFF X-FACTOR X3 was purchased back into the herd as an aged bull after topping our 2003 bull sale. He is one of our highest IMF% scanning bulls as was his dam Doris V9. X-Factor is incredibly potent at breeding high marbling cattle from even moderate IMF cows. As a rising 10 year old he was sound and still very active in natural service. We have retained two of his sons for stud duties. His MVP's (Molecular Value Predictions) have him in the top 2% of the breed for Marbling.

11 sons sell.

REFERENCE JOINING SIRES

RAFF ENTICER E66
17/03/2009

RAFF ENTICER E66 is sired by the breeds leading maternal sire TC Dividend - a bull Drew Uden of the famous TC Ranch in USA told us in 2008 he was reintroducing into his herd to breed some cows despite of him being first used over twenty years ago - this proves that good genetics never date. Enticer E66 is a power bull with extra neck extension and vigor. His progeny are well made and exhibit all the desirable qualities of their sire.

9 sons sell.

RAFF EMBLEM E69
18/03/2009

RAFF EMBLEM E69 adds to the amazing of battery of sires that Hoff Moriah 822 has produced for us. Sired by Limited Edition's sire Hoff Charger, Emblem again has the power and volume lacking in so many Angus today. It would be hard to change his confirmation to make it any better. His calves are all of a type while his flush sisters are really great females. Emblem is such a safe and predictable sire who has stamped his type consistently on his progeny.

7 sons sell.

RAFF EMPEROR E106
18/04/2009

RAFF EMPEROR E106 is another power packed Moriah son. We used his sire Leachman Hoss to capture the genetics of his dam Leachman Lass 1004 (also the dam of Leachman Prompter) - a cow that David Raff ranks as one of the all-time great Angus cows he has seen. Emperor is a big boned and strong headed sire with near perfect feet and legs with big testicles. He has so much volume and width of hindquarter that indicate he should breed cows with shape and capacity. We really like his progeny - his daughters have capacity while his sons are powerful.

7 sons sell.

REFERENCE JOINING SIRES

RAFF EXPLOSIVE E108
21/04/2009

RAFF EXPLOSIVE E108 is one of only a handful of Connealy Danny Boy sons in Australia. He is a massive bull that typifies what a Raff bull should be - phenomenal growth, extreme length, great neck extension and perfect shoulder set. He is sound on his feet and legs with a powerful head combined with excellent performance data. Explosive prowls the paddock like a cat while maintaining his condition at the completion of a season. His progeny are born easily, grow quickly and are real performance cattle.

8 sons sell.

RAFF ENCORE E110
25/04/2009

RAFF ENCORE E110 is a $\frac{3}{4}$ brother to Emperor combining what we believe to be the best modern day cow Hoff Moriah 822 with our favorite old cow Leachman Lass 1004 - the power of the pedigree really shows through here. To sustain a viable cow herd sooner or later the breed is going to need these reliable tried and proven genetics that breed bulls with power and capacity and cows that have shape and constitution. Encore is an upstanding individual, smooth through the front, wide through the back end and a wonderful nature. He sells as lot 1 - the only reason he is being sold is because we are retaining a flush brother.

10 sons sell.

RAFF EXTERMINATOR E201
01/08/2009

RAFF EXTERMINATOR E201 was a standout at birth and is proving to be one of our better breeding bulls. His extreme length, strength of spine, fine skin type and sheer capacity sets this bull apart from the rest. Used heavily as a yearling and again as a 2 year old Exterminator has at last had a chance to physically express his potential. His identical flush brother who sold for \$18,000 at our sale last year at 25 months weighed 1,152 kg EMA of 147, 17/15 fat, 6.1% IMF% and a 44cm scrotal with a 7.9 frame - he was just an awesome body of beef that ticked all the boxes!

2 sons sell.

REFERENCE JOINING SIRES

RAFF DANNY BOY D207
19/07/2008

RAFF DANNY BOY D207 was the \$18,000 second high selling bull in our 2009 sale purchased by Steve Hayward & Kelly Smith and Paul Weir where he is breeding exceptionally well for them. Like Raff Distinction D197, Danny Boy D207 has massive volume, extreme length and thickness with great structure - he is a real power bull with substance and capacity. His only son that sells was the first born calf from this year's Brisbane Royal Show Interbreed Champion Cow - Raff Blackbird D349.

1 son sells.

RAFF DANNY BOY D210
24/07/2008

RAFF DANNY BOY D210 is a flush brother to Distinction D197, Defender D218 and Danny Boy D207 and was the highest selling bull of the flush purchased by Keelendi Angus in 2009 as a yearling. This was an amazing flush with three flush brothers selling for \$21,000, \$18,000 & \$14,000. We have retained the best, Raff Distinction D197, for within herd stud duties here.

1 son sells.

RAFF APPEAL E88
27/03/2009

RAFF APPEAL E88 was a high selling bull at our 2010 bull sale selling for \$18,000 - he was certainly one of the better Appeal sons we have bred. E88 was an uncomplicated bull with a big whole of life daily gain of 1.57 kg/day whose mother is a large framed, big girthed and all impressive cow who sold for \$10,000 to the KO Angus Stud at our 2012 female sale.

1 son sells.

REFERENCE JOINING SIRES

J & C APPEAL A10

21/08/2005

J & C APPEAL A10 first took our eye when a young calf on his mother, we returned a year later and purchased him. Few bulls have had such a positive impact in breeding bulls as Appeal has. His progeny consistently sell for an \$8,000 plus average and at the 2011 Sydney Royal both the Senior and Junior Champion Angus bulls were both Appeal sons. He is the sire of Raff Empire E269, our most acclaimed show bull and senior stud sire. One son that sells as lot 3 was the Reserve Senior Champion at both Rockhampton Beef and Brisbane Royal Shows this year with his second son an incredible performance bull at lot 10.
2 sons sell.

HOFF LIMITED EDITION

14/02/1998

HOFF LIMITED EDITION is a real legend in the Angus breed world-wide. His progeny have sold to \$32,000 and with semen sales has grossed us in excess of \$1.5 million. His daughters are some of our best breeding cows. Limited Edition progeny never date.
3 sons sell.

DMM SHIFT 78S

22/03/2006

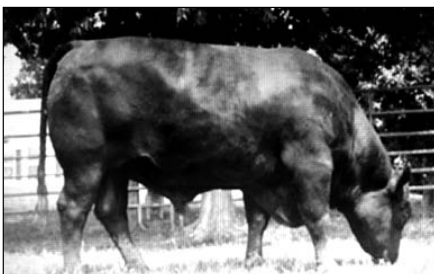

DMM SHIFT 78S was inspected by us at the Miller Wilson ranch in Canada when we purchased Australian semen rights- that same year he went on to become the Canadian Show Bull of the Year. His mother is an awesome cow who has bred many stud sires in Canada. Shift progeny are all docile in nature, thick across the top and of moderate maturity. His daughters have perfect udders and hold their condition well after calving. His MVP's (Molecular Value Predictions) have him in the top 40% of the breed for Marbling.
4 sons sell.

ONEILLS ROYAL EDGE K337

07/03/2007

ONEILLS ROYAL EDGE K337 is described by his breeder Jim ONeill as "One of the most powerful 3 year old Angus bulls you will find anywhere. He is extremely deep, has excellent feet and legs, is extremely docile and has adequate bone with tremendous muscle and a square rump carrying down to an excellent quarter. Like all Expedition he is extremely long bodied." We have some really good Royal Edge daughters coming into the herd.
2 sons sell.

RF SHOCK-N-AWE

03/03/2004

SHOCK-N-AWE is a bull we saw at Hawkeye AI Center in Iowa on our last visit to the USA. We were impressed with his scale, balance and structural correctness - he was a bull with a lot of natural thickness and depth of quarter. Unfortunately Shock-N-Awe was bred in a herd with no performance recording so has received little recognition in the industry. This is a classic example of a bull with so much to offer the industry but being ignored simply because of the over emphasis of performance recording and the lack of courage by stud breeders to look outside the circle for new genetics.
1 son sells.

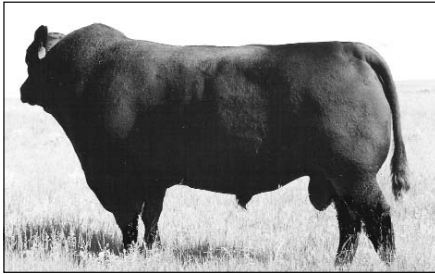

ONEILLS EXPEDITION

28/01/2004

ONEILLS EXPEDITION was probably the best sire we saw in any AI center on our last trip to the USA. Expedition is an exceptionally long bodied bull with a strong and thick top with a deep body. He is the sire of ONeills Royal Edge K337, Raff Exterminator E201 and Raff Ego E266 - all current stud sires. His only son that sells features as lot 2 whose dam produced this year's Brisbane Royal Show Interbreed Champion Female - Raff Blackbird D349.
1 son sells.

REFERENCE JOINING SIRES

HOFF CHARGER

13/02/1995

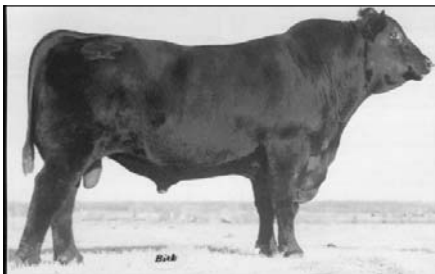

HOFF CHARGER is a bull we used in our embryo program on the Hoff cows purchased at South Dakota in 2006. He is the sire of Hoff Limited Edition, Raff Dakota D85 and Raff Emblem E69. Charger is a commercially orientated beef bull with style and proven.
1 son sells.

DMM POSI-TRACTION 57P

03/01/2004

DMM POSI-TRACTION 57P is a maternal brother to our Canadian semen sire DMM Shift 78S who we have used extensively over recent years. Posi-traction was used heavily in the Miller Wilson herd in Canada but only sparingly in our herd as Shift was our preferred choice. Like all DMM cattle he had exceptional thickness and volume with good maternal traits.
1 son sells.

LEACHMAN PROMPTER

07/04/1986

LEACHMAN PROMPTER must surely rank as one of the most influential sires of his time with many of today's good breeding bulls going back to him. His maternal power from his dam, Leachman Lass 1004, made Prompter an easy choice for us to use in our USA embryo program -we have not been disappointed. Prompter and his sons have all the valuable attributes lacking so much in the breed to-day. His only son that sells as lot 1 who is from the legendary Hoff Moriah 822 - Raff Encore E110, a used and highly proven stud sire.
1 son sells.

SCOTCH CAP OB45

09/02/1992

SCOTCH CAP OB45 is an old sire who is still highly regarded for his maternal and carcass traits, particularly marbling. He is the sire of Raff X- Factor X3 and Raff Xquisite X167 who have been successful sires for us.
1 son sells.

ONEILLS RENOVATOR

22/07/1983

ONEILLS RENOVATOR is a tried and proven sire that ranks up there with the breed's great sires. David Raff saw his dam, ONeills Eraline 42, on his first visit to USA in the early 80's and rates her as one of the all-time great matrons of the Angus breed. We are now using a direct descendant of hers, ONeills Prime Star 80, in our program.
1 son sells.

BANQUET TIME FRAME Y135

03/04/2003

BANQUET TIME FRAME Y135 held the Australian record auction price of \$50,000 until just recently. He was a huge bull out of the breed legend Kiwi Dream M41. We leased him for a season from the Anvil stud after his purchase. His real value has been his daughters who are proving to be some of our better matrons.
2 sons sell.

GENOMIC ENHANCED EBVs

Pfizer Animal Genetics has recommended that Raff Angus submit the HD50k results to Breedplan for inclusion in the Angus Group BREEDPLAN analysis. These Genomic Enhanced EBV's combine pedigree information, individual performance data from the animal, its relatives and progeny, and the genomic information in the form of MVP's from more than 50,000 individual markers provided by HD50k for Angus.

"The Raff Angus breeding program is driven by multi-trait selection that demands excellence in profitable, quality beef production. It is driven by old fashioned cattlemen with integrity and a commitment to using modern technology to achieve its goals".

August 2012 Angus BREEDPLAN analysis

Angus GROUP BREEDPLAN EBV percentile bands for animals born in 2010

Use this table as a guide to compare individual animals with the current genetic level of the Angus breed

	Calving Ease				Growth & Maternal					Fertility		Carcase					\$ Index Values

**Lot 1**

Raff Encore is an extremely docile, heavy weighing and easy fleshing proven sire who sells only because we have used him for the past two seasons and a younger flush brother is being retained - Raff Freddo F143. His dam, Hoff Moriah, is certainly the most dominant Hoff cow for breeding big muzzled animals with extra capacity, great feet and performance. Her sons have topped the past three sales with a further seven sons retained for within herd stud duties. No photo can capture this sires true beef qualities and he should certainly be destined to stud duties - he will be the last Leachman Prompter son we will be selling from Moriah 822.

**Lot 2**

Falcon F49 is a massive framed bull with incredible weight for age and bone that always stands proud. A flush brother has sold to Irelands Angus for stud duties with a flush sister being the second high seller to Murra Angus at this year's March female sale. Falcon is a huge performance bull and considered by us to be a 'purpose' bull. We intend to bring his best sister, Blackbird F14, into the donor herd because like Falcon she will compliment most of this new era's 'type' of Angus cattle - she weighed 902kg's at 29 months. The dam of Falcon also produced this year Interbreed Champion Female, Raff Blackbird D349, at the Brisbane Royal Show.

**Lot 3**

There is absolutely no need to use a black euro of any breed to inject weight and yield into your program when there are Angus bulls like this. From birth Franco has been a meat machine. His dam is a magnificent breeder that excels for docility and maternal attributes whilst his sire needing little introduction as he produced one of Australia's most acclaimed show bulls in recent decades Raff Empire E269. Franco's raw data excels for weight for age and he visually expresses a revealing jump muscle so rarely seen in British cattle. He stood Reserve Senior Champion at this year's Rockhampton Beef Spectacular to Raff Empire then was again recently awarded that same title at the Brisbane Royal Show.

Lot 4

Fugitive stems from a long line of quality Duchess female's whose closest five grand-dams having all featured as donors in the Raff breeding program to as far back as 1986. He is a long and slick skinned bull that has a deceivingly good hind quarter width and expression on a large frame. His sire was introduced to our program several years ago from Canada and has proven to breed cattle with a moderate maturity pattern that are docile and thick.

 RAFF BURNETTE M51

Lot 5

Raff Fury F321 was a standout as a calf and as with the previous lots was on our show team for this final year of our 'take our cattle to the people' marketing campaign. His sire was a full import from our highly consistent producer Hoff Moriah 822 who topped our 2009 sale where he sold for \$21,000 when just under 14 months of age. His dam produced a high selling lot 1 Limited Edition son at our 2010 sale. Fury travels with ease, has a good head type with plenty of strength throughout.

Lot 6

Fonzie F352 was the first natural calf from this year's Brisbane Royal Show Interbreed Champion Cow - Raff Blackbird D349. At just 20 months of age he weighed 936 kg's - one of the heaviest weight for age bulls we have bred in our 47 years. He is a truly unique sire when you combine his absolute strength of pedigree, his big EMA, high IMF% scan and good doing ability - he is also visually very appealing. Fonzie has a wonderful nature and is as big butted an Angus bull as you will find anywhere. This lot is a sire destined for great things and should not be overlooked.

RAFF BURNETTE W111 (APR)

RAFF BURNETTE S112 (APR)

**Lot 7**

Frodo was retained from last year's group of bulls as he was not only a big weight gainer but he was reported as an elite carcass sire through HD50k for Angus whilst individually recording one of the highest IMF% scans for that year of 7.0% at just 14 ½ months of age - 12 months later and after two joining's he returned with a recording of 7.2%. With calves on the ground Frodo will inject added carcass qualities without sacrificing too much on what the greater majority of beef producers get paid for ... weight.

**Lot 9**

Gambler would be one of the first sons to sell in Australia by a bull that impressed us several years ago when viewed in the States - 'Shock n Awe'. This is a young sire with a good genetic variance to the mainstream. His common link is of his maternal grand-dam Raff Doris W10 who produced Raff Midland Z204 - one of Australia's highly used AI sire's of recent times. Gambler has always had extra eye appeal with good weight for age and measurements.

**Lot 10**

There are two basic necessities to profitable beef production that this lot will add - weight for age and docility. Raff Appeal G39 is a magnificent beef bull that has performed well above his contemporary group since birth - he is the last J&C Appeal son to sell this year and is a ½ brother to lot 3 and Raff Empire E269. G39 has an excellent foot and leg set with enough softness on a body full of red meat.

 HOFF STARLETTE SC 441
 HOFF HI GAL S C 410

**Lot 11**

G1 was named Genomic as he was the first ever 2 month old calf that we tested using HD50K for Angus. This athletic young sire has extreme length and strength of spine with a real sires head with well hooded eyes - his dam is a full sister to the mother of Hoff Limited Edition. Genomic was shown as the calf at foot at the Melbourne Angus feature show last year where the pair won the open cow/calf class.

**Lot 12**

The pedigree of this moderate and beefy bull is mostly from the heart of the now dispersed Scotch Cap Angus herd in South Dakota. He was born early and weighed just 29kg's at birth yet has grown on with a solid weight gain. His dam is a flush sister to two stud sires - Raff Duke D367 and our recent addition Raff Flash F187 who weighed 1172 kg's at just 25 months in August. Suitable for heifers.

G4 is one of the earlier maturing bulls catalogued to sell. His dam was one of our leading Limited Edition daughters that sold well at this year's Female sale who was a genetic flush sister to our record top priced bull that sold for \$32,000 in 2006. We have two magnificent sisters to this lot - he will be tough and breed beyond himself. Suitable for heifers.

This is the first of three flush brothers to sell that has extra bone, power, and excellent sheath with 'top end' weight for age. He was two kilos lighter at birth than his contemporary group yet has gained 10% more for daily gain. His dam is structurally faultless whilst his sire is undoubtedly the heaviest bull we have ever bred weighing 1460kg's at just under 4 years of age

Only 20 doses of semen from his sire came into Australia with this being the first Posi-Traction to sell at auction. He is very docile in nature, has extra width of hip to pin set with softness and sound feet. The dam of G8 has twice the spring of rib and capacity to the mainstream Angus with his paternal dam, DMM Miss Essence 90K, being the dam of our Canadian sire DMM Shift 78S. Less favourable hair type.

Dazzler G47 would be one of the growthiest Dazzler D353 sons to sell. He has been a massive weight gainer ranking equal 4th within his contemporary group with a whole of life daily gain of 1.41kg/day. His dam certainly excels for docility and is very well bred coming from our most influential Doris cow - Forres Doris H78.

This bull is an XFactor son that was born light who has proven to be a sound performer in all traits. His dam was very sound footed as a rising 14 year old whilst his grand-dam being all but perfect structured when sold on for further breeding duties at 16 ½ years. She had reared 15 calves here for a 368 calving interval. Suitable for heifers.

**Lot 29**

G44 is a very well made bull with good thickness and muscle expression that has always been the quiet one in the mob. His sire was a real calf getter with a brother to Defender D218, Raff Distinction D197, considered one of the widest bulls we have bred. G44 has enough softness combined with growth to allow for market flexibility on his progeny.

**Lot 32**

Another really easy fleshing Defender son that has softness and balance. His pedigree is full of very strong cow families - Wilcoola, Moriah and Burnette. The strength of your maternal line underpins the success of any breeding program. With these three great cow families there is little doubt that he will breed consistently and true to type.

Lot 33

The sire of G57 is a full brother to our Brisbane Royal Show Interbreed Champion cow - Raff Blackbird D349. This quality lot has extra smoothness of shoulder whose dam is sweet and very functional. If you want to keep some replacement heifers then consider some from Dynamite G57 as they should live long and bred on. Excellent hair type. Suitable for heifers.

NUAGE DUCHESS F34. (AI) (ET)

Lot 34

Dictator G61 will mature to be a large framed sire with good bone. His sire is certainly on the top end for size weighing in excess of 1400kg's but considered by us a 'changer/purpose' bull - every Seedstock breeder should have one. The maternal line of G61 has proved to excel for longevity with his 2nd dam retiring at 15 years and 3rd dam at 19 years of age.

G67 is a growthy and robust bull with good bone and spirit. Again the dominant breeding cow Doris H78 is just several cows back maternally. She was also a dominant show female of her time in the late 80's and later as a breeding cow was certainly regarded as a real 'bull producer'. This lot should breed heavy bullocks.

	16 ½	580	1.09	4.7	37	98	7	5	6.2

The 21st century terminology for this type of bull is 'stout' meaning short in stature and thick in profile. His dam however is a large framed female, his grand-dam is even bigger being a frame score 9 with both their sires standing at 63 inches. Big joined to big does not always produce big - traditionally Angus cattle were small and this lots reminds us how easy it can be to reduce frame size by one generation. Suitable for heifers.

G95 is again sired by Dynamite D345 who is a flush brother to this year's Brisbane Royal Show Interbreed Champion Female - Raff Blackbird D349. He has good width of top-line, extra hind quarter expression and general muscle pattern who is also docile in nature. With his strong maternal pedigree this bull will breed heavy steers or good replacement females. .

Raff Dynamite G96 has not broken records in any particular trait but has a pedigree of proven and reliable cattle. There is no doubt in my mind that 'lesser' performance cattle with strong pedigree merit will breed far more consistently than the 'one off' high performing animal of little genetic merit - something that is sometimes overlooked.

**Lot 51**

G101 is also sired by a flush brother to this year's Brisbane Royal Show Interbreed Champion Female. This bull has gained lots of weight recently and now ranks 2nd within his contemporary group of 49 bulls for weight gain with a 1.43kg/day gain. He is a larger framed Dazzler son with good hoods and plenty of length - all of his raw data is exceptional.

**Lot 52**

There is certainly more weight in this bull than meets the eye as visually you would not think he was as heavy as he is. Weighing 708 kilo's at less than 16 months of age G102 is from one of our better Ultimate U27 daughters. He is clean through the front and starting to crest suggesting he will not mature extreme in frame. Excellent hair type. Suitable for heifers.

	16	614	1.2	6.4	35	108	9	6	6.0

G103 weighed just 33 kilograms at birth and is maturing to be a growthy and smoothly made bull. His dam has a magnificent full brother retained here for stud duties, Raff Emperor E106, who has such strength of head and muzzle that the combined muzzles of two high marbling stud Angus bulls would replicate. Less favourable hair type. Suitable for heifers.

Purchaser..... \$.....

He again combines Hoff and Raff maternal genetics who is a ¼ brother to the previous lot. His sire was reintroduced into our herd several years after topping our 2003 bull sale because of his predictable carcass traits. The dam of G104 is large framed and as with the previous lot she has a flush brother retained for stud duties - Raff Emblem E69. Suitable for heifers.

G105 is a good honest black beef bull that is balanced and square set with enough individual performance and pedigree backing to breed on. His same aged contemporary group last year had a top EMA measurement of 102 sq. cm - his is 103 sq. cm. This year our bulls have more red meat and weight - the two main things we get paid for. Suitable for heifers.

	15	672	1.39	6.4	38	100	8	6	5.0

A flush brother to the previous lot. He may be a little rougher around the edges than G112 but has extra neck extension and is long in body with good feet. His sire had his first daughters milking in March and more recently with all showing near ideal udder qualities. Dakota D85 is a ¼ brother in pedigree to Hoff Limited Edition - the sire that needs no introduction.

Raff XFactor G107 has the appearance to be the growthy type but should mature to be about the average size for our bulls sold. We had quite a number of twin sets last year - 16 in total - this is one of them. His dam is one of our hard working cows that never looks pretty but simply works on rearing a good calf. Suitable for heifers.

Purchaser..... \$.....

Defender G120 is a quality bull with good substance, bone and presence. His real whole of life weight gain has been big averaging 1.40kg/day. He also recorded the equal highest IMF% within his contemporary group of 54 bulls at 7.0% - rarely do marbling and weight gain work together. This is a great bull to start the new group off. Suitable for heifers.

**Lot 60**

We very nearly kept this bull for within herd stud duties. From birth G121 has had that 'sirey' outlook and presence so important in breeding bulls. He is long and loose skinned with depth of hindquarter. At 14 ½ months he weighed 662 kilograms and ranked 6th on whole of life weight gain in his group with even fat and a big EMA. He is a sire for quality beef production. Excellent hair type..

Raff Dynamite G124 is a very robust bull that has extra spring of rib and capacity. His sire was a magnificent beef bull with outstanding skin type and muscle. We sold him at auction last year, Raff Dynamite D345, then his brother privately, Raff Dazzler D353. We then purchased a genetic brother Stoner Point Fever Pitch F93 earlier this year who was out of the 'pick of the flush' dam at the Hoff dispersion sale in 2006.

The dam of Raff XFactor G126 is a full sister to the mother of Hoff Limited Edition and was the first embryo calf born from the Hoff genetic imports. G126 is a big nutted and moderate framed bull that combines carcass and softness from his sire with a maternal pedigree of shear power. This bull is a full genetic brother to Raff Genomic G1 who sells as lot 11. His MVP information is outstanding. Suitable for heifers.

There is genetic variance on this lots maternal side as his dam resulted from the purchase of four embryos down south after viewing their live sister siblings. The Vicki cow line is one of the more renowned cow families in Australia. This bull has been a moderate performer in all traits that has reliability and depth of pedigree to breed predictable cattle.

Lot 65

Duke G136 is a bull that I have always liked. He is not the biggest performer but has always had a great nature and has always stood square with a very neat body of beef. This is the first Duke D367 son to sell who, as a sire, is breeding progeny all of a kind. We have retained a full brother to Duke, Raff Flash F187, who at 26 months weighed 1172kg with a 146 sq. cm EMA.

	14	644	1.41	7.6	37.5	97	5	5	5.2

Raff Dakota G139 will mature to be large in frame and heavy in weight. At 14 months he weighed 644 kilograms with a gain of 1.41kg/day whole of life. He was heavier than the average for birth weight but as we say 'the ones that are heavier at birth are the ones that are heavier for life' - birth weight and calving ease are too often confused. A quality lot.

**Lot 68**

This is as complete an Angus bull as they come. He has very good width of hip to pin and is soft enough to be called 'soggy'. He was below his contemporary group for weight at birth yet above average for whole of life weight gain, he had more fat and IMF% yet combined it with a bigger EMA than the group average and he had bigger than average testicles.

AGE AND RAW DATA INFORMATION LISTED WAS TAKEN AT 12th AUGUST

	14	594	1.32	7.2	36.5	98	6	5	4.4

Raff Emblem G143 has easily proven the importance of genetic strength within a pedigree as his dam was nothing outstanding to look at but contained all the right pedigrees. This lot has good feet, a strong sirey head and very good hip to pin setting. His sire really stamps his progeny as they are all square with excellent structure. There is lots of longevity within him.

Purchaser..... \$.....

AGE AND RAW DATA INFORMATION LISTED WAS TAKEN AT 12th AUGUST

	14	636	1.42	6.9	38.5	107	11	8	5.8

Lot 74

This is an outstanding lot that must go into a breeding program that wants superior genetic gain. Dynamite G156 carries himself really well for his weight for age who, at scanning time ranked 7th within his group of 54 for kg/day gained. He has extra neck extension, is docile and stems from a really good breeding cow line. This bull should not be overlooked.

G178 is another high quality Angus beef bull that will breed fast growing and heavy weighing progeny suitable for any market. He currently ranks 4th in his group gaining at 1.50kg/day whole of life combined with some outstanding scanning data. He has loads of width, plenty of capacity with great bone, style and depth of hindquarter. He will add value to any herd.

There has been some explosive performance within the previous four lots yet here is another. For total completeness it is very hard to find a fault in Raff Defender G179. He has presence and general eye appeal with great weight for age and extra softness. His dam is an easy doing and structurally well-made female that always breeds well. Excellent hair type.

	13 ½	530	1.17	6.3	35	80	12	7	5.8

Dictator G182 does have a little more 'get up and go' than most so he should be tough. His sire is as big an Angus bull we have bred and would want, but is considered by us to be a 'Purpose' bull. Prior to joining in August he stood at 64 inches tall and weighed over 1400 kilograms and carrying it with absolute ease - his structure and mobility are faultless.

There is no doubt that big ears in British cattle are a good indicator of how the animal will grow - big ears they grow / little ears they don't. When you have poppy eyes combined with little ears you are not in luck for making money. Dakota G190 will mature to be large in frame and would be best suited into a moderate and thickset herd. Less favourable hair type.

	13 ½	481	1.11	5.6	35	83	10	7	5.4

Raff Enticer G220 is a compact and square set young bull that combines some great pedigrees. Australian, Canadian and American genetics are all within this lot. There is so much predictability in the Doris cow family that has been going since 1965. He weighed just 29 kilograms at birth - 25% lighter than his contemporary group of bulls. Suitable for heifers.

	13 ½	600	1.37	7.2	39	107	6	5	4.8

Lot 105

This is an impressive lot that does have some 'life' to him but comes from a quiet natured cow line. At just 13 ½ months he weighed 600 kg with a massive EMA of 107 sq cm. Good heads with muzzle have disappeared a little because of the Angus breeds chase for marbling - this bull will correct that. He has plenty of rib and girth who will be powerful when mature.

**Lot 106**

Raff Explosive G224 is another quality high performance bull that is very similar in weight for age to lot 105 but with 30% more intramuscular fat at scanning. His dam is our Doris matriarch having produced 42 progeny with one daughter, Raff Doris W10, being the dam of Australia's highly used AI sire Raff Midland Z204. This bull has unlimited genetic potential..

Raff angus	Age mths	Weight kgs	ADG kg/day	Frame score	Scrotal cm	EMA cm ²	Rump fat mm	Rib fat mm	IMF%
	13 ½	620	1.41	7.7	38.5	105	7	6	4.5

There is so much to like about this bull. His dam is perfectly sound and still active here at 16 years of age with 15 calves born for a 363 day calving interval. His sire is as mobile an Angus bull as you could want weighing in excess of 1400 kg's. This lot himself has been gaining 1.41kg/day. He will breed bullocks that weigh and daughters that live long and stay fertile.

Purchaser..... \$.....

AGE AND RAW DATA INFORMATION LISTED WAS TAKEN AT 12th AUGUST

	13 ½	596	1.37	7	39	100	8	6	5.2

As with the past three lots Raff Explosive G233 had a massive EMA scan when just 13 ½ months of 100 sq cm. Whilst an EMA scan is just a measurement of the surface area at one site and does not measure how deep that muscle is, you can gain confidence as to how much red meat is on an animal when you look at kilos gained per day. G233 has a big EMA with big daily gain.

**Lot 109**

G235 is another son from a flush brother to Raff Blackbird D349. The pedigree of this lot is rock solid with none of the highly used Precision, New Design etc. genetics in him that in some ways has shrunk the Angus breeds genetic diversity because of the chase for 'paper' performance. G235 has great shoulders with length and plenty of spring of rib. Suitable for heifers.

This is a really good son from the used stud sire selling as lot 1 - Raff Encore E110. He has plenty of style and outlook to him with solid performance and extra rump and rib fat when compared to his contemporary group. His dam has calved down this year a really good Raff Emperor E106 son. This bull will breed good types for varying markets.

"It is important to select for as much of any economically important trait within a breed, but as soon as we start to change another trait of importance we must stop there and accept that this is as far as we can go."

All your agribusiness lending needs, rolled into one.

Introducing the new Business Ready Package.

For a true all-in-one agribusiness lending solution, look no further than the Business Ready Package*. It includes up to three term loans and an overdraft facility – all rolled into one convenient package.

With the flexibility and freedom to combine different loan types, you'll find it easier to keep in control of your cash flow and grow your business. Other benefits include:

- High interest of 3.00% p.a.* paid on all balances in credit
- Easy access to your overdraft by cheque, cash or internet banking
- Choice of fixed or variable rate term loans, either interest only or principal and interest
- No hidden charges. A single quarterly fee covers all standard transaction charges*.

To find out how the Business Ready Package could help keep your business on a roll, talk to your District Banking Manager today.

Raff Dynamite G242 is literally a tank on legs. He is a wonderfully quite natured beef machine that has thickness, is easy doing combined with a big weight gain. His dam is a really powerful brood cow with muzzle and plenty of girth. It is easy to see why there is so much substance in this lot knowing his dam and the full sister to his sire - Raff Blackbird D349.

Lot 115

Raff Dictator G245 is an outstanding sire who will certainly fast track your genetic progress for improving mobility, weight for age, back end width and structural integrity. At just 13 ½ months he weighed 624 kg's gaining 1.43 kilos/day whole of life. He has enough looseness to undoubtedly suggest he will be a massive sire when mature. His dam breeds exceptionally well every year.

V D A R NEW TREND 315
QRF BURNETTE Q88 (AI) (ET)
FORRES BURNETTE K41 (AI) (ET)**Lot 118**

This lot is full of class being the equal 2nd highest daily weight gainer with a massive 104 sq cm EMA at scanning time on the 12th August within his 42 mates in his group. He is very square set on a large frame. His genetics may be 'old' but simply throw away the common belief that you have to use 'new' genetics to make genetic progress and use this bull as he will simply add value.

AGE AND RAW DATA INFORMATION LISTED WAS TAKEN AT 12th AUGUST

Raff Angus	Age mths	Weight kgs	ADG kg/day	Frame score	Scrotal cm	EMA cm ²	Rump fat mm	Rib fat mm	IMF %
	13	520	1.22	5.7	34.5	91	8	7	6.2

Enticer G256 was just 33 kg at birth. Interestingly a 750 kg cow that calves a calf at 6% of her bodyweight will produce a 45 kg calf. Comparatively a 550 kg cow giving birth to a calf at 6% of her bodyweight equates to a 33 kg calf. Breeders think of the birth weight of the calf only never birth weight of calf relative to weight of cow. This is something seriously missed within the industry. Suitable for heifers.

Raff Angus	Age mths	Weight kgs	ADG kg/day	Frame score	Scrotal cm	EMA cm ²	Rump fat mm	Rib fat mm	IMF %
	12 ½	522	1.27	6.5	39	39	91	7	5.0

This is the first of two Raff Exterminator E201 sons that sell with another flush brother selling as lot 148. This bull will prove highly fertile as he has a big actual scrotal size and a high ranking MVP within the top 5% for HD50k - be sure to keep his daughters. At birth he looked a beauty and is growing on with good softness and natural fleshing. His dam is sensational.

Purchaser..... \$.....

AGE AND RAW DATA INFORMATION LISTED WAS TAKEN AT 12th AUGUST

Raff Angus	Age mths	Weight kgs	ADG kg/day	Frame score	Scrotal cm	EMA cm ²	Rump fat mm	Rib fat mm	IMF %
	12 ½	510	1.22	6.3	34.5	74	7	5	5.0

Although this lot does lack a little more length than the average he is still maintaining a strong weight for age with thickness. There is a fair bit of horsepower in both his grand sires being Leachman Prompter and Hoff Limited Edition. Bulls such as this lot are more likely to breed beyond themselves when they have a pedigree containing such breed legends.

Lot 141

Raff Dallas G305 was one of the more powerful bull calves at birth. He will add weight, improve bone structure and work exceptionally well on Brahman or even Wagyu type breeders. His sire was the Grand Champion Angus Bull and later stood second in the Interbreed at the 2010 Brisbane Royal Show - his progeny are very consistent.

Lot 142

For those that want animals that don't eat much and are very efficient with what they eat then this lot must be considered. His MVP information ranks him in the top 2% for the Angus breed for both Dry Matter Intake and Net Feed Intake. He has more rib and girth than his twin brother that sells next and will mature to be neat and honest. Suitable for heifers.

Lot 145

The dam of G312 is a large framed cow that is super quiet with big feet and capacity. His sire is a magnificent Angus beef bull that will improve every trait of economic importance. Gaining 1.36kg/day at scanning time this young bull will certainly weigh heavy when mature. His pedigree is full of 'old' genetics but with that comes predictability. Less favourable hair type.

Yearling bulls - Tapping their immense potential

By Sandy Yeates - Department of Ag NSW and Angus breeder - Patawalla Rylstone NSW.

Yearlings becoming popular

In Australia and other parts of the world, there is a trend toward using bulls at yearling age (12-18 months). This allows introduction of superior genetic material into herds a year earlier than normal, resulting in faster genetic improvement.

Their introduction has the potential to allow breeders to extend the working lives of bulls by a year or more, lowering the bull costs of a herd. This extra work load is achieved at the time in their lives when they are young, lean, fit, and exuberant. They are free of the structural problems that beset older bulls.

Yearling bulls have much to offer both genetically and financially. However, poor management can reduce calving percentages, compromise animal welfare and limit their lifetime potential. In order to harness the immense potential of yearling bulls, special management is required - their age and physiological status demands it.

Why are yearlings different?

Apart from their age, yearling bulls are different from older bulls in a number of ways.

They are still growing strongly, and tend to be leaner, carrying less body fat reserves. They are usually fitter and more agile, although not necessarily stronger than older bulls. They are also smaller in size and more subordinate to older bulls, which makes them more injury prone when, mixed with them, especially in the sexually competitive environment of a joining group. Yearling bulls are usually sexually inexperienced and more likely to be sexually immature, and their health and body condition are far more sensitive to poor nutrition and the challenges of internal and external parasites.

Although special management is required, much of it is common sense.

Why use yearlings?

Cattle producers with experience in managing yearlings often say that they prefer them because they settle in better mix with other cattle more easily and are easier to handle than older bulls. However, there are some far more tangible incentives in using them.

In south-eastern Australia, the average working life of a bull is less than 3 years - not a very satisfactory performance for one of the main operational costs of a beef cattle enterprise. By first using bulls as yearlings, the working life of a bull can be extended by a year or more - a 25% increase. As a result, the purchase price and running costs of bulls can be spread over more calves. This reduces bull costs per calf and boosts profitability.

Yearling bulls also allow cattle breeders the opportunity of achieving faster rates of genetic improvement. This is due to the influence of what geneticists call 'generation interval', the average age of parents when their calves are born. By using genetically superior bulls as young as possible, faster turnover rates of genes are achieved. Joining yearling bulls to yearling heifers can maximize genetic improvement by lowering generation intervals.

Yearling bulls are significantly less costly to produce. Seedstock suppliers sell their bulls 6-12 months earlier, which simplifies their management and reduces overheads.

In addition to these advantages, there is strong circumstantial evidence to suggest that bulls used first as yearlings have even longer working lives because of superior fitness and lower levels of body fat. The more active lives of these bulls means that they are maintained at bodyweights below their genetic potential. As a result, less stress is placed on their skeletal structure when serving, with less likelihood of breakdowns occur

The two biggest causes of breakdowns in bulls are from hip arthritis (over 50% of all wastage) and broken penis. Over conditioning bulls for shows and sales, especially multi vendor sales, exacerbates both these conditions. It would appear that bulls used first as yearlings are less affected by these serious sources of economic loss.

Will yearling bulls be sexually mature?

British breed yearling bulls will generally be sexually mature if they:

- Are well grown
- Are in good condition (fat score of high 2 or low 3)
- Are 12 months of age or older
- Have a scrotal circumference of 32cm or more at 12-14 months

The onset of puberty is directly related to the level of nutrition. Bulls on a high plain of nutrition are more likely to reach puberty at a younger age. In some cases, this may be as young as 8 months old. Poorly grown or low-condition bulls are risky for use as yearlings, as they may not have reached puberty.

Around puberty, testicles grow very quickly, resulting in rapid increase in scrotal circumference. In well grown British breeds this 'growth spurt' is normally expected to take place between 8 and 13 months of age, under optimal nutrition.

Yearling bulls - Tapping their immense potential

Minimum scrotal sizes (cm)

Age (months)	Simmental	Angus Charolais	Hereford Shorthorn	Limousin Bos Indicus
12 - 14	33	32	31	30
15 -20	35	34	33	32
21 - 30	36	35	34	33
30+	37	36	35	34

In general, some European breeds and Bos Indicus, or their derivatives, reach sexual maturity later than British breeds. As a result, they are often not suitable for use at yearling age.

Dr Glen Coulter of the Agriculture Canada Research Station, Alberta, has documented the minimal scrotal sizes across all breeds. These are based on thousands of measurements and are set out in the table below.

Dr Coulter suggests that cattle producers should select bulls with scrotal sizes substantially greater than these minimums. He suggests that bulls with the scrotal sizes less than these minimums are likely to have limited sperm producing capacity and unacceptable fertility under moderate to heavy mating loads.

Serving ability

Yearling bulls are usually sexually inexperienced when joined for the first time. As a result, they are sometimes, but not always, a little clumsy and awkward. However, young bulls have very steep learning curves. This learning phase may cause minor delays in the start of calving. Should this be a problem, joining should start 7 or 14 days earlier than normal to compensate for the slight delay.

Mating management

Yearling bulls can be effectively joined in either individually or in peer groups. They should not be joined with older bulls because of 'dominance'.

In a mixed group, older bulls may get up to 75% of the cows in calf while young subordinate bulls miss out. Joining yearlings with older bulls is not only wasteful and inefficient, it is also risky, as the young bulls tend to be more injury prone. In addition, there is less risk of exposure to venereal diseases when young bulls are joined in peer group.

Single or multiple joining?

Bulls that are being watched by other bulls are likely to serve females more often - they respond to an audience. Conception rates in multiple joining groups are usually higher, which is understandable, since there are more services made in multiple joining groups than single joining groups.

It is not uncommon for bulls joined in groups to fight in the first week of joining, even though they had been run together before joining. Apparently they sometimes need to re-establish a pecking order. This settling down phase may help explain why calves occasionally start arriving later than they should.

Multiple joining groups have traditionally been a kind of on-farm insurance policy against the risk of having a dud. If one bull in the group is freeloading the others will cover for him, so that conception rates don't suffer. But the insurance does not come free (it never does). There is evidence that injury rates in multiple joining groups are higher, especially when the bulls in the group are of different ages.

The incidence of 'broken penis' is higher in multiple groups, especially when the younger bulls are joined with older bulls. Yearling bulls should never be joined with older bulls - the risk of injury is just too great. They should be joined either by themselves or with other yearlings.

But won't yearlings be too small to reach cows?

Compatibility in size between bulls and females will obviously be important. To ensure optimum conception rates, use only well grown yearling bulls and join them to heifers or young cows. This has the additional advantage that yearling bulls are lighter than older bulls and are less likely to injure heifers.

If the biggest cows in a joining group fail to conceive, size may be a factor. However, it is risky making 'blanket' statements. I have witnessed the sexual prowess of some small high serving, yearling bulls at Trangie, serving dry cows significantly larger than themselves and wondered how it was physically possible. Sex is apparently a wonderful motivator!

But won't joining bulls as yearlings knock them around?

Bulls do not die from too much sex. However, they do lose condition. This will depend on their health, the quality of their feed, the length of the joining period and the number of females they are joined with. A lot of common sense is needed in order to strike a balance. In extensive areas with only average or poor quality feed, the joining season should be restricted to 6-8 weeks.

Yearling bulls - Tapping their immense potential

The use of yearling bulls is limited only by their health and fitness. It does not matter whether they 'won't grow out' as it's just not relevant. If our beef industry is to make progress, we must purge our minds of the belief that a bull has to be fat and well grown to be any good. The value of a bull should be measured by the performance of his offspring - not on what he looks like. After all, when was the last time you saw a fat rabbit, fox or 'roo? Those species carry no subcutaneous fat, yet they don't appear to be facing extinction!

Maintaining bulls in anything fatter than 2 or 3 score condition is wasteful, counterproductive and inefficient. Bulls that are allowed to get fatter than this are either sexually inactive or under-used.

Won't yearling bulls have smaller calves?

It is surprising how many cattle producers think that young bulls are more likely to sire small calves. They are purchased in the mistaken belief that they can reduce calving difficulties. Clearly that is not the case. There is no relationship between the age of a bull at joining and the weights of his calves.

The birth weight of calves is heritable, so a bull will influence, genetically, the birth weight of his calves.

If you are concerned about birth weight, buy a bull that has a low EBV for birth weight, or one that had a lower birth weight than the average of other bull calves in the same drop. If data on birth weights is unavailable, select a bull of only moderate size or one that has been successfully delivered by a heifer. In general, larger framed bulls tend to have heavier calves at birth.

Mating potential

Experience with serving capacity tests has shown that for every ten bulls tested there is at least one, and probably two, bulls unable to complete a normal service on a female. Our bull batteries have far too many 'free-loaders' in them.

As a result, cattle producers have compensated by joining more bulls than would normally be required. Accordingly, we have tended to be conservative in our recommendations on bull percentages. However, the practice of using a higher percentage of bulls than is needed, to compensate for the free-loaders, is wasteful and inefficient. Bulls should undergo a thorough physical examination each year to eliminate the costly non-performers.

Under ideal conditions, correctly managed yearling bulls may be successfully joined to 45-50 females providing they are proven higher servers with large testicles. If no serving capacity information is available, a more conservative approach is needed in the first year, until you have a track record for the performances of yearling bulls on your farm. In these situations, mating loads of only 25-30 females are recommended.

The condition of the yearling bulls is critical. If they drop below 2 score condition, sperm production may be impaired.

Summary

In order to harness the potential of yearling bulls there are three crucial management requirements.

1. Join them either alone or with bulls of the same age.
2. Join yearling bulls for 6-8 weeks (two cycles) only, then spell them for at least 3 months.
3. After removing yearling bulls from their joining groups, place them on high quality feed in specially prepared paddocks.

Experience has shown that many young bulls have been ruined because they have been joined for too long and under conditions that have challenged their survival. If, at any stage, yearling bulls drop below 2 score condition, they should be withdrawn from their joining group immediately.

IMPORTANT NOTICES FOR PURCHASERS

~ SALE CATALOGUE DISCLAIMER ~

"All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor or the selling agents make no other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information."

WARRANTIES

BULLS

1. The seller warrants that:
 - (1) Bulls are fertile and capable of natural service within 6 months of date of sale to the purchaser ("Warranty Period"); and
 - (2) Bulls are of the parentage as catalogued.
2. The seller will credit or refund the purchase price of bulls (excluding any costs and expenses of the purchaser in taking delivery):
 - (1) Where the purchaser claims a bull is infertile, upon the purchaser submitting a veterinary report after the expiration of the Warranty Period stating that the bull is infertile or incapable of natural service, and a Statutory Declaration by the purchaser to the effect that the substance of the report is true and correct. The veterinarian must state that in his/her opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The veterinary report and Statutory Declaration must be forwarded to the seller within 14 days of the Warranty Period expiring. Any refund payable by the seller will be made within 21 days following the receipt by the seller of the veterinary report and Statutory Declaration.
 - (2) Where the purchaser claims the bull is not of the parentage catalogued, upon the purchaser submitting a DNA test or blood test within the Warranty Period indicating that the animal is not of stated parentage.
 - (3) Where the term "credit" is used means the giving by the seller to the purchaser of a sum equivalent to the amount of the purchase price for use by the purchaser only in relation to the purchaser from the seller of another bull.
3. The purchaser acknowledges that the purchaser does not rely and it is unreasonable for the purchaser to rely on the skill or judgment of the seller as to whether the bulls supplied are reasonably fit for any purpose for which they are being acquired

Disclaimer of Warranties

The seller makes no representations or warranties regarding the state, quality or condition of the bulls offered for sale or sold. The Trade Practices Act, 1974 (Cth) and certain corresponding State Legislation imply terms, conditions and warranties into some contracts for the supply of goods and services and prohibit the exclusion, restriction and modification of such terms ("Prescribed Terms"). Except as provided by the Prescribed Terms all terms, conditions and warranties express or implied by custom, law or statute in any way relating to the state, quality or condition of the females offered for sale or sold are hereby excluded.

Limitation of Liability

Except as provided by the Prescribed Terms, the seller shall not be liable for any indirect, incidental, special and/or consequential damages including but not limited to loss of profits arising out of any reliance by the purchaser on the information or content set out in this sale catalogue and/or the quality or condition of the bulls offered for sale or sold. To the maximum extent permitted by law the seller's liability for breach of any Prescribed Term is limited at the option of the seller to:

- i. The replacement of the bull; or
- ii. The supply of an equivalent bull; or
- iii. The payment of the cost of replacing the bull or acquiring an equivalent bull.

The
Game has
changed...

The new HD 50K for Angus provides MVPs on 16 traits using more than 50,000 DNA markers, providing the most reliable genomic predictions today. Now incorporated into Angus Group BREEDPLAN EBVs!

The new High-Density (HD) 50K for Angus provides Molecular Value Predictions (MVPs) for economically important traits, allowing you to:

- Identify early, those calves with the best genetic potential
- Make genetic progress on economically important traits that are difficult to measure
- Increase accuracy to allow more informed selection decisions
- Increase your rate of genetic gain
- Provide more value to your customers

Bull Sale

*"Mundibulanga" Drillham Q
September 2013*

VISIT www.raffangus.com.au FOR UPDATED
INFORMATION CLOSER TO THE SALES

“MUNDIBULANGA” DRILLHAM

From Drillham take the South Drillham Road over the railway line, straight ahead on to the gravel road for 6km to t-junction, turn right. “Mundibulanga” 2km on left.

Travel

Daily air flights between Brisbane and Roma QANTASLINK. Phone 13 1313

Accommodation and transport from Roma to “Mundibulanga” can be arranged by contacting the vendors or your preferred agent.

An all weather 1300 metre airstrip is located just south of Miles. For transport please contact the vendors.

A 900 metre gravel airstrip is located on “Mundibulanga” adjacent to sale complex.

“Mundibulanga” is approximately 4 hours by road from Brisbane and 1 hour from Roma and 8 kilometres south of the Warrego Highway.

Accommodation

- Golden West Motor Inn MILES - 07 4627 1688
- Starline Motor Inn MILES - 07 4627 1322
- Windsor Hotel/Motel MILES - 07 4627 1159

Be sure and book early due to limited accommodation
