**BULLS WITH A DIFFERENCE**

**SPRING SALE**

**113 BULLS**

FRIDAY 19TH AUGUST 2022 - SALE STARTS AT 1PM

SELLING AT "MUNDIBULANGA" DRILLHAM QUEENSLAND

**Raff Napoleon N327**

Standing 62 inches at the hip and weighing in excess of 1240 kilograms. Fifteen sons feature in this sale.

**Sired by Raff Empire E269**

Winner of 11 Inter-breed Supreme Beef Exhibit of the Show titles.

❖ **53 x 21–23-month-old spring 2020 born bulls**  
**Lots 50 to 53.**

❖ **60 x 17–19-month-old autumn 2021 born bulls**  
**Lots 54 to 113.**

**Sire of lots that sell**

Idvies Eric S735

**Sire of lots that sell**

Gilbertines Powerhouse

- ❖ • Breeding Soundness Evaluated and crush slide semen tested by Dr Ced Wise
- Ear notch tested free of Pesti Virus and double vaccinated with Pestigard
- Calving ease and weight for age (200, 400 & 600 day growth) recorded
- Frame Score and Scrotal Circumference measured
- Ultrasound Scanned for Carcase Traits
- Sire Verified and Genomic Tested
- Blooded with 3 Germ Tick Fever
- Interfaced on Auctions Plus and Elite Livestock online platforms
- All raw data information available on each lot
- Individually videoed

*“...when comparing our spring bull sale result last year to both the Queensland and New South Wales State sale averages for the 2021 Angus bull selling season 80% of our bull draft sold below the states per head average price representing great value for money - 15% sold for \$6,000”.*

**Sire of lots that sell**

Jindra Megahit

# Welcome

Following on from last year's return to Queensland this year's spring sale will again be held at our past property and selling facility at 'Mundibulanga', Drillham where fifty rising two-year-old bulls and sixty 18-month-old bulls will be offered. These bulls headed up to Condamine late April in preparation for this year's sale.

This sale is represented by a solid line up of lots sired by a number of homebred sires including a large draft of Raff Napoleon N327 sons. Sired by show sensation Raff Empire E269 and used for several seasons Napoleon sold as the lead bull at last year's sale. These sons have real performance, tremendous mobility and a beautiful soft and loose skin type.

Descendants from the Hoff Scotch Cap lines continue throughout the sale draft, a handful of direct sons from United Kingdom AI sire imports sell as do grandsons to these bulls. If you want muscle and

big weight gains off grass then these should certainly be of interest.

There is also a handful of sons sired by the great bulls of past decades used for their genetic linkage without pedigree compromise – Shady Brooke Explorer, Paramount Ambush, Traveller 23-4, Scotch Cap 0B45 and Crusader of Stern. We even have a son from an AI sire born 43 years ago. Used for their maternal capacity full brothers SAV Sensation and Seedstock have sons selling as with new USA sire Jindra Megahit who has some big boned and heavy weighers selling.

Please note that several weeks before the sale David Reid will be scanning them a second time for carcass. This information along with their individual weights, whole of life daily weight gain, scrotal size and frame score will also be taken at this time.

*“...we are big believers in an individual's raw performance and believe it's very meaningful when it can be compared against others in herd from within a strong contemporary group”.*

This data will be collected too late for inclusion in this sale catalogue however it will be available through our website, on Facebook and as a supplementary sheet sale day.

With the retirement of our good friend and professional sales manager Michael Glasser of GTSM we have now moved across to the GDL Studstock team based at Dalby. They will be managing, selling and settling this sale.

We promote this sale as the 'Raff Angus Bulls with a Difference Sale'. Our breeding emphasis focuses more on extra growth and weight for age with heavier carcass weights and enhanced Feed Efficiency.

---

*“...we choose not to breed low birthweight, low mature cow weight, high marbling and positive fat cattle. We believe these types of animals restrict weight gaining potential for the cow/calf producer, the backgrounder and feed lotter and they have the inherent negative correlation on carcass weight and yield for the processor”.*

We welcome and encourage you to take the time to understand our program and look at the bulls.

We are very proud of this draft that sell – they are a culmination from 57 years of dedicated breeding of Angus Seedstock for the Australian Beef Industry.

*Sincerely,  
The Raff Family*

# Certified Organic King Island Grass Fed Raff Angus Steers...

We were very excited to sell our first fully Certified Organic cattle in January this year. These steers produced a 382.7kg Carcass Weight average when just 20-21 months of age. Processed by Greenham at their Certified Smithton plant in Tasmania the top carcass weight steer was at 456 kilograms with the top marbling steer recording a Marble Score of 6.

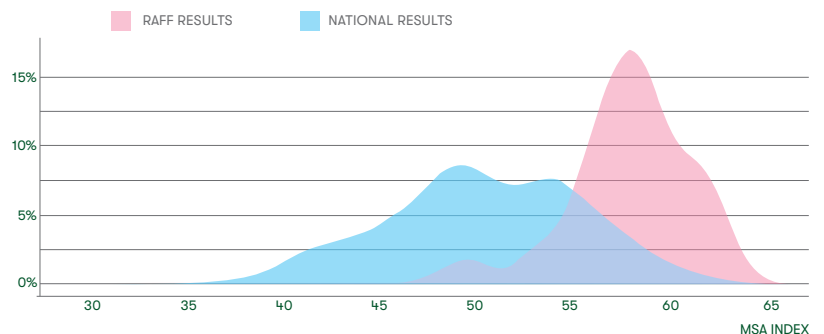

*“...one of the great advantages of our move to King Island has been that we are now able to have our selection criteria totally focused on the commercial reality of premium grass-fed beef production based on real carcass feedback”.*

CARCASS ATTRIBUTES STEERS <230 OSS.	RAFF ANGUS AVERAGES	NATIONAL AVERAGES
MSA INDEX	58.07	50.56
CARCASS WEIGHT (KG)	401	299
HUMP HEIGHT (MM)	60	75
OSSIFICATION (100-590)	500	500
AUS-MEAT MARBLING (0-9)	2.2	1.1
MSA MARBLING (100-1190)	460	340
RIB FAT (MM)	10	8

Interestingly the highest dollar value carcass was ranked within the lowest 91% for profitability in the Angus Breed for the Heavy Grass Selection EBV \$\$ Index highlighting the potential inaccuracies of these Indexes in our herd because of its genetic variance to mainstream.

**The following information was sourced from Meat & Livestock Australia myMSA dashboard**

The below information details where this group of Certified Organic Raff Angus steers sat when benchmarked against the NATIONAL COMPARISON for all animals processed that day, 04/01/22, with an ossification <230, Grass Fed, no HGP.

*“...with the same ossification score our steers yielded an 82-kilogram heavier carcass with more marbling and more fat. On that day’s grid price, excluding the certified organic premium, these Raff Angus steers were \$738/head more profitable when compared nationally.”*

**The following information was sourced from Meat & Livestock Australia myMSA dashboard**

The below information details where Raff Angus cull females sat when benchmarked against the NATIONAL COMPARISON for all females processed over the past twelve months sorted with an ossification >230, Grass Fed, no HGP.

**“...with the same ossification score our cull cows yielded a 94-kilogram heavier carcase with double the marbling and more fat. On current grid prices of \$7.50/kg these Raff Angus females were \$705/head more profitable when compared nationally.**

CARCASE ATTRIBUTES STEERS <230 OSS.	RAFF ANGUS AVERAGES	NATIONAL AVERAGES
MSA INDEX	62.52	60.68
CARCASE WEIGHT (KG)	383	301
HUMP HEIGHT (MM)	65	60
OSSIFICATION (100-590)	160	160
AUS-MEAT MARBLING (0-9)	1.8	1
MSA MARBLING (100-1190)	420	330
RIB FAT (MM)	9	7

## We know Marbling is important but does weight still pay?...

It is the great debate Marbling v Carcase Weight & Yield – particularly in the Angus breed.

Within this past decade there has been increased selection pressures to have Angus Seedstock cattle reported by EBV's to be very low birthweight, be of low mature cow size and very high in marbling. As a generalisation Fat has a negative correlation to Muscle. That is why Wagyu's and Jersey's look the way they do. Animals with more Fat generally have more Marbling. Higher Growth animals (200, 400 & 600 day weight) generally have heavier Carcase Weights, Higher Yields, are leaner and have lower NFI-F EBVs (indicating the animal is expected to eat less feed per day, relative to their weight and rate of weight gain). Marbling is a well-researched indicator to eating quality.

**“...however, with this ever-increasing current selection pressure is weight gain, yield and actual carcass weight being overlooked”?**

Both processors that purchase finished cattle off King Island pay premiums for carcass quality. Bodies that Marble Score 2 with and MSA Index of 62 receive a 20cent premium above standard grid price. For those bodies that grade with a Marble Score 4 or greater and MSA Index of 64 receive a 40cent premium to the standard grid. We had a good friend sell a trailer load of heifers in March. For decades he has been purchasing bulls from leading mainland studs that put strong selection emphasis on carcass quality. Several years ago, he used semen of our well proven sire Raff Jovial J350 whose Selection Indexes rank him in the worst 90 to 98% for Profitability within the Angus Breed. Two of the thirty-six heifers within the trailer load sold were sired by Jovial. The consignment averaged 356kg carcass weight, 76sq cm EMA, Fat 17mm and a MSA Index of 64.80. Incredibly the average marbling score was

– AuMarb 4.28 with a top of 8 / MsaMarb 676 with a top of 1050!! 60% of the consignment received the 40cent/kg premium and 20% of the consignment received the 20cent/kg premium for marbling. The remaining 20% were standard grid price or were discounted because of being too fat or, as with one of Jovial's daughters, too heavy.

**“...however, the \$\$/head value is the ultimate profitability indicator. The two Jovial animals had the heaviest and 2nd heaviest carcass weights – 408kg and 444kg. They were not extreme in marbling but these two bodies were the highest and 3rd highest \$\$ value carcasses hanging on the hook on a dollars per body value. Despite the consignment averaging a Marble Score of over 4 and even after receiving premiums for marbling those with the heavier Carcass Weight were the more profitable”.**

Here at Raff Angus, we know calving ease and carcass quality are important. However, these are naturally inherent qualities within the Angus breed. Without losing these key qualities our enhanced selection priority is for animals that weigh heavier at younger ages and produce bodies of beef with big carcass weights and high yields. With this breeding belief we know cow/calf operators, backgrounders, feed lotters and processors can all be profitable.

*‘The mature cow weight debate... Is a big tractor less efficient than a small one just because it consumes more fuel?’*

# Sale Information

## Sale Day

Sale starts at 1pm with bulls selling at 'Mundibulanga', 641 Moores-Bice Rd DRILLHAM Queensland auctioneered through the ring by Mark Duthie and Josh Heck of GDL. Bulls will be penned and ready to inspect from 9am.

If you are unable to attend the sale day you have the option to watch, listen and bid on either of the online platforms – **Elite Livestock or AuctionsPlus** – your choice.

## Inspections

Bulls will be available for inspection prior to sale day on request. To arrange for this please contact Andrew Raff 0429 691 975 or Mark Duthie GDL – 0448 016 950.

On sale day all bulls will be penned and ready to inspect from 9am.

## Phone Bidding

Phone bidding facilities will be available on sale day. Be sure to contact sale agents GDL before the sale to arrange. Mark Duthie 0448 016 950.

## Registration Status

All sale lots are Registered with the Angus Society of Australia.

## Animal Identification

All bulls are freeze branded with the 'bench axe' symbol, year letter and number. Each lot will have a tag lot number in their near side ear. The off-side ear has their NLIS tag. Lot numbers will be paint branded on bulls for sale day.

## Carcass Evaluation

We are yet to sell the 120 x steer brothers to these sale bulls for both individual and national benchmarking carcass comparisons. However, the last steers we sold (January of this year and brothers to last year's autumn sale group) produced a 382kg Carcass Weight average when just 20-21 months of age. With information sourced from the Meat & Livestock Australia myMSA dashboard these steers yielded an 82-kilogram heavier carcass with more marbling and more fat. On that day's grid price, excluding the certified organic premium they received, these Raff Angus steers were \$738/head more profitable when compared nationally.

## Sire Verified

All animals within this sale have been Sire Verified.

## Genomic Tested

Each lot has been HD50k tested. This information has been analysed and included within the TransTasman Angus Cattle Evaluation.

## Raw Data

All bulls were scanned this year for carcass on the 1st March with this information included within the TransTasman Angus Cattle Evaluation. Ultrasound scanning data on sale bulls will again occur on 4th August by David Reid. At this time the bull's actual weight and average daily weight gain, scrotal size and hip height measurement will also be collected. This information will be too late for inclusion in this sale catalogue. However, it will be available on our website, through both Elite Livestock and AuctionsPlus selling platforms and on our Raff Angus Facebook page. A sale day supplementary sheet will also be available.

## EBV Information

July 2022 TransTasman Angus Cattle Evaluation EBV's for all lots are published on pages 22 - 24 for quick reference and again individually within each lot. For the most current analysis go to the Angus Australia - Sale Animals – Raff Angus sale catalogue....

## Health Treatments

All lots have been tested free of Pesti-virus. They have been vaccinated for Tick Fever and are ready for immediate transport into ticky areas however we do recommend a booster shot post sale on arrival at your farm. They have been Pestiguard & 7in1 vaccinated. Early May, prior to being transported to Queensland, they received a Cydectin Pour-on drench, Multimix and HyB12 health treatment. Mid-July they had a second pour-on for lice prevention.

## Breeding Soundness Examination

All bulls have undergone a thorough examination by Ced Wise AB Services to check their physical structure and breeding anatomy both internally and externally. All bulls have produced viable semen using the crush slide morphology test.

## Raff Angus semen interest

With the sale of young bulls there is always, with the passing of time, the possible regret of having sold certain genetic lines. All bulls sell with 100% possession and semen rights however if Raff Angus want to access particular bull's genetics at a later stage, we would appreciate access to such bull for semen collection. This would be for own in herd use only. Time of collection will be at the convenience of purchaser with all expenses to be incurred by Raff Angus.

## Photos & Videos

Individual photos and videos were taken by Ben Hooper of Clear Vision Imaging late July. These will be available for viewing on our website within the first week of August.

## Delivery

All lots will be available for delivery immediately after the sale. Livestock carriers Mick & Kathleen Moffatt will be handling all of the transport and delivery arrangements. No animals are to be transported without communication with Mick - 0407 658 194 or Kathleen – 0427 545 302.

## Refreshments

Lunch and refreshments will be available on sale day thanks to The Baking Asylum with the compliments of the Raff family.

## Insurance

We strongly encourage successful purchasers to insure their bulls for loss of use from illness or injury and death. Generally, the highest risk for any mishaps occurring is within the first six-month period from purchase date while the animals are transported, adjust to their new environment and settle into their new animal groups.

## Guarantee

In the unlikely event of a bull proving incapable of natural service within 12 months of purchase, provided it is not caused by injury or illness after the fall of the hammer, the vendor agrees to provide the purchaser with a satisfactory replacement if available or issue the purchaser with a credit equal to the purchase price minus salvage value that may be used to purchase another Raff Angus bull. A veterinarian certificate must be presented to Raff Angus within this 12-month post sale timeframe.

## Sight unseen guarantee

We are happy to assist with lot selections for those that are unable to personally inspect the sale draft by offering an unbiased and honest assessment of the bulls. Those that purchase any lot sight unseen within this catalogue, that have discussed their selection with the vendor, are offered an unconditional money back guarantee of the lots purchase price if the purchaser is not satisfied with their purchase within seven days of taking delivery of their animals.

## Sale Day Safety

All sale lots have been screened for temperament and are under normal circumstances, quiet to handle. However, there are inherent risks associated with cattle handling. Visitors enter the cattle pens at their own risk. Children must not enter the yards. People entering the yards are at risk of injury. Be especially alert for bulls fighting and pushing around the pens and if one is playful with you do not respond. We do not expect our sale lots to be aggressive, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember even the quietest bull can in fact be an unpredictable animal. Do not crowd the bulls inside the pens. There are many dangers involved in handling livestock, so please use common sense and be alert at all times. Do not enter pens unnecessarily. Please call upon any of the agents for an escort through the bulls if required.

## Disclaimer

Raff Angus - We pride ourselves on our upfront and honest appraisal of our cattle. We are always happy to provide assistance to those seeking guidance and our opinion. However, the final decision will always be that of the potential purchaser. The partners of Raff Angus are not in any way responsible for the final result or performance of any resulting purchase outside of our guarantee.

Angus Australia - Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

## Animal Registration Transfer

All lots that sell will be transferred to the successful purchasers unless otherwise stated as soon as practical proceeding sale day. Bulls are transferred without expense.

# AuctionsPlus

## How to Register and Bid on AuctionsPlus

1

Go to [www.auctionsplus.com.au](http://www.auctionsplus.com.au) to register at least 48 hours before the sale.

2

Select “**Sign Up**” in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select “**Dashboard**” and then select “**Request Approval to Buy**”.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: [info@auctionsplus.com.au](mailto:info@auctionsplus.com.au)

# HOW TO REGISTER with

# ELITE LIVESTOCK AUCTIONS

Simply go to [www.elitelivestockauctions.com.au](http://www.elitelivestockauctions.com.au) using your desktop, laptop, iPad, iPhone or android device.

Click on the **"Sign Up"** page / link

Create a bidding profile using the bidder registration page.  
*(You can either register as a livestock agent, company or private buyer)*

Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue

Click **"Register"**

You will then be notified by email that an account has been created.

Once an account has been created you are all **"Set to Bid"**

Each Auction can then be viewed by clicking **"Live Auction"** logo on the Elite Livestock Auctions website.

Once you receive email notification that your account has been created please go to the sale you wish to bid at and click **"Request to Bid"**

The sale will then approve your application to bid and on the sale catalogue you will see **"✓ Bid Request Approved"**

On Sale day simply login, click **"Enter Auction"** on the catalogue page and you can start bidding.  
*(There is no need for software download)*

At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

# REFERENCE SIRES

## RAFF ULTIMATE U27 SV

ID QRFU27 | DOB 11/06/1999 | AMF,CAFU,DDFU,NHFU | HBR

This bull was a magnificent and large framed individual of his time so docile in nature and sound in structure. Following several seasons of within herd use we sold him privately in 2002 for \$30,000 to Teyon Station, Alice Springs. His dam was a super fertile cow containing two of the three sires we imported live from the USA – Hoff Rafferty and Premier Commodore. There is just the one lot that sells by him from a donor cow and direct USA O'Neills Angus import – O'Neills Royal Lady K128.

## RAFF JOVIAL J350 DV

ID QRFJ350 | DOB 21/07/2013 | AMFU,CAFU,DDFU,NHFU | HBR

This is the bull to use if you want to produce females docile in nature with increased spring of rib, capacity and udder quality with the traditional head shape and muzzle strength. His sons have good toplines and always stand on good foot, bone and leg structure. His dam was an extraordinary cow – big in stature and heavy in weight. There are some wonderful high-performance sons selling - these are super quiet with plenty of natural fleshing, do-ability and big weight gains. These will be the last sons to sell so be sure to take the time to look through them as they are well worth consideration.

## RAFF JACKMAN J451 PV

ID QRFJ451 | DOB 10/08/2013 | AMFU,CAFU,DDFU,NHFU | HBR

We sold Jackman in 2015 selling to Eli & Michelle Vogel 'Charlton Park', Clermont. If we had shown him that year at Beef Australia, which we had seriously considered, he would have moved forward in that sale to be one of the feature bulls. There was so much to like about him. His pedigree was a standout oozing with maternal qualities stemming from the Duchess line introduced in the mid 80's from the live importation of Premier Julie and Premier Commodore. Sired by Raff Empire E269 Jackman had tremendous mobility with width of top line, good muscle definition and that general appeal that all true sires should possess. We collected semen from him prior to his sale for within herd use only.

Raff Empire E269 – sire of Raff Jackman J451

# RAFF FONZIE K135 PV

ID QRFK135 | DOB 03/04/2014 | AMFU,CAFU,DDFU,NHFU | HBR

He was the last bull lot we sold at auction before our move south in 2015 and a sire we subsequently purchased back from the McNicholl Family at Dulacca some years later. His sire was the first natural calf from our 2012 Brisbane Royal Show Interbreed Champion Cow - Raff Blackbird D349. At just 20 months of age, he weighed 936 kg's - one of the heaviest weight for age bulls we have bred and a truly unique sire when you combine his absolute strength of pedigree, his big EMA of 130sq cm, high IMF% scan of 7.1% and good doing ability - he sold for \$30,000. This son - Fonzie K135 - had a wonderful disposition and an excellent skin type combined with a good muscle pattern. His full sister and Doris maternal line are one of our strongest and most consistent producers - they live long and stay sound. A son selling within the autumn group is one of the highest growth bulls catalogued.

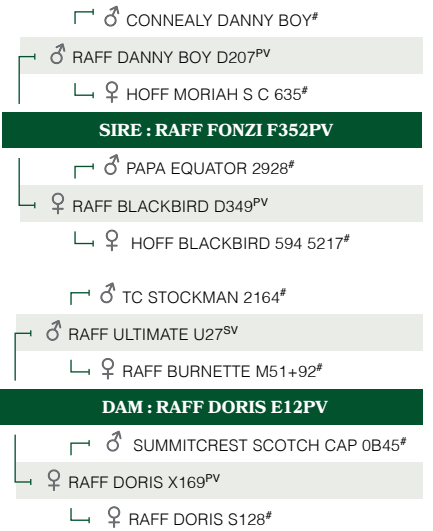

Raff Fonzie F352

# RAFF STEWIE L62 PV

ID QRFL62 | DOB 12/03/2015 | AMFU,CAFU,DDFU,NHFU | HBR

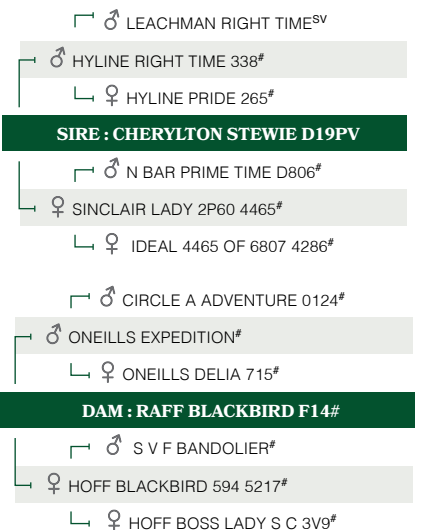

He was sold at just 12 months to Llandarlo Angus Stud in Victoria. He has plenty of performance both on paper and within pedigree. His sire was moderate framed yet thick in profile that truly excelled for finish and marbling ability being proven through the Angus Australia cohort program. The grand-dam to him, Ideal 4465 of Ideal 6807 4286, features in the Americans 'Angus Legends' book and is described as "The Angus breeds feed-efficiency matriarch with more than \$2.5 million in progeny sales." The dam of Stewie L62, whilst large in frame and heavy in weight was superbly feminine and extraordinarily well balanced for her unique scale - she was faultless. His sons that sell, using Lockhart as their names, have his inherent length with improved carcass quality traits. We retained two from the spring group and used recently on heifers. One of these bulls had the unique combination of recording a very large EMA and very high IMF percentage when scanned for carcass.

ID QRFL156 | DOB 25/02/2015 | AMFU,CAFU,DDFU,NHFU | HBR

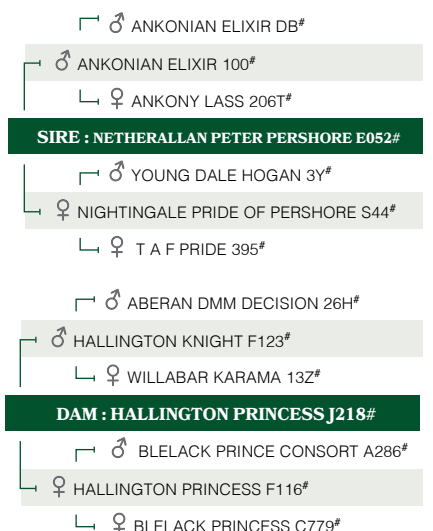

Sometimes we use sires that we don't necessarily want our herd to fully replicate but want an injection of a particular trait or traits of importance. For Lethal Weapon it was - growth, weight, yield and efficiency. Each of his progeny have added frame and always weigh heavier within their contemporary groups. Numerous steer sons have been the highest dollar value animal from a carcass standpoint. He has proved that carcass weight and yield still drive profitability. His calves do weigh heavy at birth but despite his EBV they are born easily - trust us. He was imported by ourselves as an embryo from the United Kingdom. This son selling will be the last direct son to sell. Within the autumn group of bulls.

# RAFF MAJOR M74 SV

ID QRFM74 | DOB 31/08/2016 | AMFU,CAFU,DDFU,NHFU | HBR

This maternal masterpiece contains some outstanding genetics within his pedigree. His dam resulted from an embryo import following the purchase by us of Hoff Lady Durham SC540 at the 2006 Hoff Scotch Cap dispersion sale. We were losing bidder to his sire's dam, Hoff Blackbird 5218, at that same sale and were fortunate that Rawburn Angus in the United Kingdom secured her resulting in the creation of Rawburn Boss Hogg – his sire. Major excelled for length with tremendous head carriage and body shape.

# RAFF MARSHAL M82 PV

ID QRFM82 | DOB 01/09/2016 | AMFU,CAFU,DDFU,NHFU | HBR

This sire is a true beef bull with extra bone and muscle. He was always an easy doing type with an abundance of natural fleshing standing on big feet with forearm strength and docility. Again, he contains no mainstream genetics – his sire is from the United Kingdom. His dam is a powerful Hoff genetic cow with tremendous neck extension and capacity. We wish we had used her sire – Raff Dakota D85 – a lot more as his daughters have bred very well. Marshall has some cracking sons selling with over the scales performance. They all have extra length and consistently weigh heavy.

# RAFF NEPTUNE N4 SV

ID QRFN4 | DOB 08/02/2017 | AMFU,CAFU,DDFU,NHFU | HBR

Neptune was a super structured sire containing some absolute power genetics within his pedigree. His sire, from Denmark, is big in stature and big in weight with tremendous strength of spine. His dam, sired by Raff Empire E269, is out of a flush sister to Raff Dictator D364 – a massive 64-inch direct Hoff Scotch Cap import that weighed over 1400 kilograms. Neptune himself was one of four bull calves within his contemporary that weighed over 500 kilos at 9 months of age with his weight the heaviest. The sons that sell combine loads of performance with outcross pedigrees.

# RAFF NAPOLEON N327 PV

ID QRFN327 | DOB 18/10/2017 | AMFU,CAFU,DDFU,NHFU | HBR

With numerous calves on the ground and plenty more to come we felt it appropriate to offer such a magnificent individual at our Spring Celebration sale last year. He sold to loyal clients of 'top end' stud sires Greenlands Pastoral Company at Guyra for \$21,000. He stood at 62 inches at the hip with a mature weight of 1246kg and scrotal of 43cm. Napoleon had tremendous depth of body with a strong sire's head, a true sires presence combined with excellent docility. For a bull with such mass, he carried himself with ease on sound foot and leg structure. His sire is Raff Empire E269 - a 10th generation Raff bred bull that traces back to our foundation cow, Sarum Doris 19th purchased in 1965. During his show career Empire clocked up over 28,000 kilometres in trucks going to shows throughout the country where he won eleven Inter-breed Supreme Beef Exhibit of the Show titles. Napoleons dam oozes of maternal qualities with a soft skin, extra neck extension with smoothness of shoulder and an excellent udder attachment with ideal teat placement. She recorded the equal highest IMF% scan of 8.1% within her contemporary group of 171 heifers. These sons selling have real performance, tremendous mobility and a beautiful soft and loose skin type.

# RAFF PEDRO P163 PV

ID QRFP163 | DOB 23/07/2018 | AMFU,CAFU,DDFU,NHFU | HBR

Having just completed another joining season, now his fifth, Pedro typifies the type of Angus beef bull we aim to produce. Kind in nature he showcases a real sires head with jaw strength with a tremendous bone structure standing on big feet with depth of heel. He is long and wide with a great muscle pattern. His sire has been one of Steve Hayward and Kelly Smiths most dominant breeding bulls whilst his dam resulted from an embryo we imported out of the USA ONeills Angus herd in Iowa. Pedros progeny are outstanding and are some of the highest weight for age bulls in the draft. You wont miss them on inspection as they are very appealing.

ID QRFP239 | DOB 25/09/2018 | AMFU,CAFU,DDFU,NHFU | HBR

I doubt you could find many more bulls about the country with the extreme backend width and extra width of pins that this sire had. He was a truly massive performing beef bull with a great skin type and forearm strength. His dam is a moderate framed cow but phenotypically ideal with a great udder shape and teat placement. Unfortunately, the industry has ignored these sires with such raw power in the fear of calving difficulty. His sons will produce calves not runts at birth but of ease of calving with massive weight gains, muscle shape and extra dollars in your pockets. Weight still drives profitability and his progeny will have plenty of it but with the added bonus of big carcass weights, extra yield and the inherent feed efficiency conversions.

ID QRFP323 | DOB 06/10/2018 | AMFU,CAFU,DDFU,NHFU | HBR

We ran Paddington with the above sire in a multiple joining group as they were half-brothers of similar type. The cow mob we ran them with were a little more moderate framed and easy-care types which complimented the individual power that these two bulls showcased. His sire, Lethal Weapon, was a direct embryo import from the United Kingdom. He resulted from one of six embryos that we requested following a trip to the UK where we viewed a full brother in the flesh to these embryos. As mentioned above these genetics will produce progeny with massive weight gains, muscle shape and extra dollars in your pockets. Paddington has some very good sons sell.

Raff Encore E110

ID QRFP399 | DOB 03/11/2018 | AMFU,CAFU,DDFU,NHFU | HBR

Moderate in frame yet ideal in body type best describe this easy-care sire that we used as a yearling on heifers. His dam was a past donor cow selling as the top priced female at last year's Spring Celebration sale. Without question she was considered by myself as being one of the absolute powerhouse cows in this modern era of Angus breeding. She was very docile and smooth fronted with extreme length, volume and shear capacity - cows of which are now all but impossible to find. The sire of J173 - Raff Franco F153 - had as much muscle expression and natural thickness that we have seen in a British bred bull with an EMA of 148sq cm. Poundmaker's sire was used for his highly recognised maternal strength.

# IDVIES ERIC S735 #

ID UKI540244 500735 | DOB 04/04/2016 | AMFU,CAFU,DDFU,NHFU | HBR

Was imported by us as an outcross genetic AI sire from the United Kingdom. His sons selling have shape with structure and grow well with heavy weights. Comments from owner Shadwell Aberdeen Angus, "...he stands square with a foot in each corner and at 12oclock. He has big feet and strong bone. When I looked at him at Idvies he weighed about 1100kgs at 20 months. He moves well for a young bull carrying a lot of weight. He is as meaty in real life as he is in his photo, natural muscle rather than fed. I'm prepared for slightly bigger calves but not many of these bulls out there with good growth figures and muscle will produce calves less than 40 kgs, I also think that breeders need to look at their heifers as they are getting narrower and would struggle to calve anything. Eric has loads of heart room which my father told me to be so important, not tubular and not gutty he has depth all the way through."

# LINTON GILBERTINES POWERHOUSE T169 #

ID UKI560236 501169 | DOB 26/04/2017 | AMFU,CAFU,DDFU,NHFU,MHC | HBR

Linton Gilbertines Powerhouse is aptly named as his progeny are all powerhouses. His sons selling combine one of the great maternal pedigree cow lines in the industry. Comments from owner John Elliot - "22,000gns Linton Gilbertines Powerhouse was the high selling bull at the 2018 Stirling Autumn sale. Powerhouse is the highest performance bull born in the UK in 2017 and the highest Index bull ever to be offered for sale in the UK by public auction. A performance giant, he combines moderate calving with mind blowing growth. His Dam, Polestar, is an average sized, wide, correct female that has bred two consecutive Stirling October high sellers. His sire, Rawburn Dublin, transmits unrivalled growth. His daughters are some of the most impressive in the Rawburn herd. We will be using this bull heavily in our own herds in 2019 because we don't know of any bull that can match him for growth, power and sensible calving ease."

# JINDRA MEGAHIT PV

ID USA17731559 | DOB 09/01/2013 | AMF,CAF,DDF,NHF,DWF,MAF,MHF,OHF,OSF,RGF | HBR

On personal enquiry to Doug Hoff of the now dispersed Hoff Scotch Cap Angus Herd about the availability of semen from Hoff Blockbuster we were advised to use his son Jindra Megahit. Megahit is marketed as the true power bull with scale crushing performance, superior phenotype and a sire that will add size and scale to his offspring. His top end progeny of Megahit here at Raff Angus have been standouts. We have used three sons on heifers during this recent autumn joining period. Our heaviest heifer was a daughter ironically out of Raff Moriah M151 – an all-Hoff genetic pedigree female. The handful of sons selling have great pedigrees, strong performance and extra bone.

ID USA16984170 | DOB 24/01/2011 | AMF,CAF,DDF,NHF,DWF,MAF,MHF,OHF,OSF | HBR

Liking the phenotype and commentary of this sire we used him lightly. His high performance and high customer satisfaction in the USA made him the #1 bull for registrations in 2017. Tour of Duty is backed by one of the most proven and impactful cow families in the business. He is a big footed and sound structured sire that transmits added length with outstanding docility. Just the two sons sell, both of which are from very nice types of cows.

The maternal strength of any species underpins its success to survive, reproduce and dominate. Without question the cow line of this bull and his brother SAV Sensation is one of the most renown and influential lines within the USA. His dam and sires dam are the two most dominant and high earning cows within the Schaff Angus program. If you add Madame Pride 0075 to SAV Resource then you have Sensation's pedigree. His phenomenal dam, SAV Blackcap May 4136, has generated over \$10 million in progeny sales. There are two sons selling. One of which must be noted – Raff Seedstock R546 - as he is out of one of the great Australian maternal cows Vermont Champagne C371.

# R R SCOTCHCAP 9440 #

ID USA9440 | DOB 15/02/1989 | AMF,CAFU,DDFU,NHF | HBR

A high-performance pathfinder sire bred in the Rollin Rock performance herd in Montana USA. He developed into a massive mature bull of his time with a weight of 1,130 kilograms. In 1998-99 he had more than 2,750 daughters in production. RR Scotchcap 9440 was a prominent progenitor of the Scotch Cap sire line from one of the breed's top herd sire producing cows.

## TE MANIA 137-79 #

ID NZE137-79 | DOB 18/08/1979 | AMFU,CAFU,DDFU,NHFU | HBR

Semen rights were purchased in this New Zealand bred sire, being a full brother to the high selling bull at the Te Mania New Zealand sale in 1981, as an outcross sire to use on Embassy and Abaridy progeny. Te Mania 137-79 bred cattle with real performance excelling in maternal qualities. His most notable daughter was dual Brisbane Royal and National Heifer Show Champion Forres Burnette A22, who is still to this day regarded by Dad as the greatest cow he ever produced.

♀ R774 OF TE MANIA#

♀ PROSE 10 OF TE MANIA#

♂ BOSUN 10TH OF ANSTEY (IMP NZE)#

♂ TE MANIA R707 (IMP NZ)#

♀ PATCH OF TE MANIA#

**DAM : TE MANIA U133 (IMP NZ)#**

♂ LANGDON OF TE MANIA#

♀ PEPPERMINT OF TE MANIA#

♀ CHICARGO OF TE MANIA#

## Sale Reminder...

Please note that there will not be individual photos of bulls within this year's sale catalogue. Instead, all bulls will be videoed on the 28th & 29th July by Ben Hooper. Once edited each lot can be viewed on our website [www.raffangus.com.au](http://www.raffangus.com.au) and our Raff Angus Facebook or through our sale listings within Angus Australia, Elite Livestock & AuctionsPlus. Further, All RAW DATA information will be collected when scanning for Carcase measurements on 4th August. This information will be accessible through the same media platforms as mentioned and as a supplementary sheet available on sale day.

### Video footage on each sale lot can be viewed at:

## Auction

### Management Group 1

Selling through the ring by open cry auction on-property at "Mundibulanga", 641 Moores-Bice Rd. DRILLHAM Queensland and interfaced with Elite Livestock & AuctionsPlus platforms.

### Sale lot breakdown

Lots 1 -53

53 x 21–23-month-old spring 2020 born bulls

### Health Treatments

All lots have tested PI Pesti Virus FREE.  
Pestiguard & 7in1 vaccinated.

They have received a Tick Fever vaccination

Early May, prior to being transported to Queensland, they received a Cydectin Pour-on drench, Multimin and HyB12 health treatment. Mid-July they had a second drench pour-on for lice prevention.

**Please note that these bulls have been run in one management group since weaning through to sale day. Their raw data can be directly compared between others for performance comparison.**

Video footage on sale lots can be viewed at [www.raffangus.com.au](http://www.raffangus.com.au)

# 1 RAFF JOVIAL R413sv

ID QRFR413 | DOB 02/10/2020 | AMFU,CAFU,DDFU,NHFU | HBR

## COMMENTS

R413 has smoothness of body, great body shape with little waist and good neck extension. He has always weighed as one of the heaviest within his group. His EMA scan in March was the second largest within group, his fat depths were even with enough IMF% relative to his muscle pattern. He is very similar to his Jovial brother R376 at lot 7 whose progeny will efficiently convert feed into kilograms of beef. Dam has had 7 calves for a 386-day calving interval.

ID QRFR472 | DOB 10/10/2020 | AMFU,CAFU,DDFU,NHFU | HBR

## COMMENTS

This lot excels for NFI-F indicating he is expected to eat less feed per day, relative to his weight and rate of weight gain. At scanning Roger Evans gave him a very high IMF fleck score of 5+ along with a high IMF%. R472 has fineness of skin with a good hair type. He is clean fronted with a tidy underline with eye appeal. He will breed females with some scale and substance with his male progeny surely making money for all sectors of the industry. Has a great pedigree.

ID QRFR450 | DOB 07/10/2020 | AMFU,CAFU,DDFU,NHFU | HBR

## COMMENTS

The all-round performance bull with tremendous length, a great skin type and outstanding muscle pattern. On inspection early July we considered him one of the best. Sired by United Kingdom genetic sire Raff Marshall M82 who has bred so well for us - this lots strength of pedigree runs deep. R450 is one of better performing bulls with magnificent weight for age, EMA and carcass quality scans. Dam has had 6 calves for a 372-day calving interval.

## COMMENTS

This is certainly one of the biggest performance bulls in the sale. He is a tremendous beef bull adding more kilos for the cow/calf operator, the backgrounder, the feed-lotter and the processor. At scanning in March, he recorded the largest EMA and the heaviest weight. He has a great coat type, strength of forearm with good hip to pin length. His muscle pattern and docility are outstanding. Dam has had 8 calves for a 383-day calving interval.

## COMMENTS

Big framed and strong boned R446 tracks well and on inspection has that true sires head carriage and eye appeal. Putting his birth weight EBV into context - whilst it is high compared to the modern Angus when comparing it against European breeds it would be around their breed average. At scanning in March R446 was 2nd heaviest in weight, produced the largest Eye Muscle Area with even fat depths. He is a cracker and from our past processing feedback sheets his progeny will prove to be some of the more profitable. Dam has had 8 calves for a 382-day calving interval.

## COMMENTS

A cracking bull both on paper and as an individual. If you like pedigrees and know a bit about our program then be sure to take the time to look back into the pedigree of this lot. I won't start going through it but I can sum it up in one word - magnificent. This lot himself recorded the 3rd equal largest EMA with even fats and one of the heaviest individual weights. He has huge capacity and volume. Dam has had 3 calves for a 377-day calving interval.

## COMMENTS

Hard to fault a bull such as this lot. He has been consistently a big performer over the scales and displays tremendous bone structure, forearm strength, hindquarter depth with real muscle. He recorded one of the largest EMA measurements in March and will be a sire whose progeny will efficiently convert feed into kilograms of beef. He is super quite with a strong head and muzzle. Dam has had 8 calves for a 384-day calving interval.

## COMMENTS

This lot is a genetic brother to our 2019 Sydney Royal Angus Feature Show record breaking top priced bull Raff Necessity N205 where he sold to Oakland Park Angus Stud, Kempsey NSW for \$34,000. If you want muscle definition with extra growth, increased yield and favourable efficiency combined with maternal stability then look no further. He is very clean skinned with great length powerhouse. A 1/2 share has been sold in his dam.

## COMMENTS

An outstanding Jovial son - remember these will be the last sons of Jovial J350 to sell for some time. However, with over 500 progeny recorded his genetic influence will still be seen for years to come. R576 has been a solid all-round performer. Get him walking and you will note his expressive jump muscle. Look over his topline and you will see his extra body width. Dam has had 7 calves for a 384-day calving interval.

## COMMENTS

A bull of pedigree makeup that should produce offspring that grow fast and weigh heavy at young ages. His carcasses will be high yielding and heavy with big Eye Muscle Areas. As well proven and within our herds carcass feedback sheets carcass weight is still king in terms of dollars per head value. R530 has massive volume and body depth and a bull that when mature will be docile in nature and heavy in weight. Dam has had 7 calves for a 380-day calving interval.

## COMMENTS

Here's another deep ribbed high-performance lot. In fact, his dam again weaned one of the heaviest heifers within the spring group this year. Jovial R584 has always weighed within the top five. At scanning in March, he was close to having the most complete raw data set from all within his group – big EMA, good fat depths and a high IMF%. Heavy growth weights with a big carcass produced with less feed (NFI-F) equals more dollars in the bank. Dam has had 6 calves for a 371-day calving interval.

## COMMENTS

This proud sire is deep chested with extra girth and softness. Grandam Starlette D55 was our first live calf born from the 330 embryos that we imported out of the Hoff Scotch Cap investment we made – she is a full sister to Hoff Limited Editions mother. R467 excels for weight for age and is sure to produce progeny with kilos. Dam has had 2 calves for a 358-day calving interval.

## COMMENTS

This is a super attractive and smooth fronted sire with softness and eye appeal. If you prefer a cow herd a little more moderate in size yet have the genetic capacity to add extra weight when the feed environment allows then this Megahit son could well suit. His dam has always maintained condition with ease with little extreme frame size within her makeup. This bull himself is very smooth bodied recording even fat scans in March.

## COMMENTS

Loads of power and individual performance within this lot's makeup. This is another very good Jovial son with good weight for age and a strong muscle pattern. He has a great top, deep hindquarter and whilst still appearing calvy will mature into a big bull. Just like his pedigree suggests his progeny will be efficient feed converters, will weigh heavy and produce big carcass weights of high yields. His daughters will mature with a good frame size – keep them.

## COMMENTS

Some well-tried and proven genetics on the maternal side of this lot. His United Kingdom sire has bred very well for us producing progeny with big ears, strong bone, extra growth with plenty of shape and style. This bull himself has a very good muscle definition, is strong muzzled and deep sided. Dam has had 7 calves for a 369-day calving interval.

## COMMENTS

We used a full brother to this lots dam, Raff Hamster H442, prior to selling him to David Young of Llundavra Angus Stud Tasmania in 2015. Of her seven calves all were bulls with six of them selling for breeding duties. Another wonderful natured Napoleon son with big ears, strong bone structure and extra pin width. On inspection you will agree that his progeny will make great bullocks that weigh heavy. His daughters will have scale and capacity.

## COMMENTS

The pedigree of this bull is magnificent. His dam, now a rising 13-year-old and still active in our herd, has 10 progeny recorded. His grandam was purchased by us at the Hoff Scotch Cap Dispersion sale in 2006 – she was Hoff Limited editions grandmother. Combine Napoleon N327 as the sire and I would say this is a genetic masterpiece!! He has extra looseness of skin, big in capacity and is deep chested with good depth of flank and mobility.

## COMMENTS

There are many things to like about this bull with extra spring of rib, good body shape and smoothness of shoulder. He measured the equal 3rd largest EMA scan with good weight for age and body shape. By using so many homebred bulls for within herd use we add so much more consistency in our progeny. Just have a look at the four front sires in his pedigree. Dam has had 9 calves for a 381-day calving interval.

## COMMENTS

R438 has some broad muzzled cows with frame size and weight within his immediate pedigree which lends these genetics to having the capability to convert feed efficiently into protein. He is good headed and docile in nature with big testis, great bone structure with a good width of pin set. This bull's progeny will grow fast and make great bullocks. Dam has had 5 calves for a 365-day calving interval.

## COMMENTS

R578 is super stylish with tremendous length and strength of spine combined with extreme smoothness of shoulder. Two flush brothers were used in stud during our autumn joining with a third already being sold for stud duties to Llandarlo Angus Cudgewa Victoria. Powerhouse T169 has bred very well for us. We believe his granddaughters and grandsons will be even better. Check out how efficient (NFI-F) a converter of feed to kilos of beef this bull will be.

## COMMENTS

Loads of constitution, capacity and do-ability in this bull. In March he recorded the highest IMF% scan of very fine fleck within the spring drop of bulls and on paper has extra finish. His dam was a big ribbed cow with grandam being the mother of stud sire Raff Marshall M82. He should be well suitable for heifers.

## COMMENTS

This is our first Jindra Megahit son to sell being one powerful individual. From birth he always expressed more bone than most. Born easily and unassisted his growth pattern and body shape suggest he will mature into a most powerful individual. He is an observer and prefers to stay back from centre stage. As with his grandmother, his dam was also a large framed and heavy weighing cow having eight progeny recorded.

## COMMENTS

This lot has a really nice combination of marbling with muscle. His sire is well renown for improving intramuscular fat whilst the pedigree of his dam is all about weight for age and red meat production. Dam has had 7 calves for a 365-day calving interval.

## COMMENTS

Another Megahit son from a hardworking mother who has 7 calves weaned. It will be interesting to see when the industry starts putting more selection emphasis on Net Feed Intake (NFI) as we hear feedlots noting that there are numerous Angus going to fat too early because of their high Marbling, high Fat genetic makeup and lacking the capability to continue to convert feed to red meat protein.

## COMMENTS

Great growth, highly fertile with tremendous feed to gain efficiency levels in this lot. He has been a strong weight for age bull throughout with smoothness of body and a deceivingly big EMA. The sire of his dam has just 17 progeny recorded in Australia – Dad personally inspected Shock N Awe in the US and liked him a lot. Dam has had 11 calves.

## COMMENTS

If you were to combine Raff Empire E269 with Blackbird E305 from this lots pedigree then you create Raff Hercules H411 – the Beef Australia 2015 Angus Grand Champion and 3rd placed Interbreed sire where he recorded an EMA measurement of 145sq cm whilst weighing 1274 kg's. Pedigree strength will always carry a lesser individual however a magnificent bull with an inferior pedigree will rarely breed on.

## COMMENTS

With the body type such as R518s there is little doubt of his genetic capacity to produce progeny of high yields. His wonderful dam recorded 8 calves before retiring because she had too much milk!! His grandam had a full brother exported to Thailand whilst his great grandam retired when she was over 20 years of age – still ideally sound.

## COMMENTS

Very nearly kept this lot for the use on heifers in our autumn joining group because of his pedigree merit. We introduced Sondergard Fred, grandsire within his paternal pedigree, through AI after international recommendations. From Denmark, Fred has the unique capability of offering ease of calving despite he himself weighing over 1400kgs when mature.

## COMMENTS

The second of two Tour of Duty sons to sell. With over 1000 progeny in Australia Tour of Duty bred progeny with the capabilities of improving Carcase Weights, yields and NFI. Leading studs have said his daughters are big and powerful types with good capacity. There is loads of punch in this lots pedigree so don't underestimate him. Dam has had 5 calves for a 365-day calving interval.

## COMMENTS

We really wanted to use Megahits sire Hoff Blockbuster however whilst there is semen in the USA available it is not eligible for export. This Megahit son is out of a very large frame and free moving cow sired by a Hoff import. In fact, in all four corners of this lot's pedigree are Hoff Scotch Cap genetics.

## COMMENTS

Despite being a donor cow this lots dam Raff Doris E12 has still maintained a 381-day calving interval on 9 calves. She has been one of the more dominant cows for stamping phenotype into her offspring. All are beautiful in nature and all are easy care with traditional natural fleshing qualities and doing ability. With the introduction of the SAV cow lines this bull and two other flush brothers are maternal powerhouses - keep their daughters.

## COMMENTS

This is a very, very high yielding Angus bull. Use him on moderate framed females that have those big fat briskets and fatty pin sets and tail heads – the ideal matchup. His dam is a strong boned female. Now with 8 calves recorded she is still very sound of both feet and udder – two traits pushed to their limits within our new farming environment.

## COMMENTS

This lots dam is a very nice young female and one that with time we are hoping will produce us a stud sire for within herd use. Loads of maternal quality in this bull. His sire has left us some very nice daughters now in production – all seem to have really good udders and teat sets and seem a little easier care than the average. Dam has had 2 calves for a 346-day calving interval

A Maternal Masterpiece. Not only should you have a look at the cow's maternal strength but also the sire's maternal strength within this lot's pedigree. We purchased Vermont Champagne C371 at the Anvil Dispersion sale and thankfully after a few flushes we now have seven daughters in our herd. Keep every one of this lot's daughters.

## COMMENTS

Don't be fooled into thinking this bull has limited genetic capability from what you read on paper. Old or unproven genetics are always discounted. His dam is now near a 15-year-old. She is as sound as a bell and a maternal masterpiece. This lot's sire is from the United Kingdom with very limited linkage. We have a full sister retained – she is powerful. He does not like pressure so best suited for the big paddock multiple joining sire environment.

## COMMENTS

An SAV son out of a magnificent Hoff Limited Edition cow who was shown as a heifer during our three years 'take our cattle to the people' marketing campaign in 2010-2012. With a pedigree as such this lot has just got to breed on. Tremendous balance in this bull. He does give you the 'eye' but has never stepped over the line.

## COMMENTS

It is nice to offer another Raff Ultimate U27 son after such an absence from the market place. Born 23 years ago Ultimate was a massive bull of his time. All of his progeny exhibited his strength of jaw and good head type. Like this lot they were all docile in nature and stood on good feet. The dam of R581 was imported by us from the USA Iowa O'Neills Angus herd in 2013 for their maternal qualities.

## COMMENTS

This lot could well be suited for the use on heifers. Whilst his dam is moderate in both weight and frame there are some big capacity individuals a little further back in this lot's pedigree. His highly fertile dam has had 2 calves for a 330-day calving interval.

ID QRFR589 | DOB 30/10/2020 | AMFU,CAFU,DDFU,NHFU | HBR

## COMMENTS

On pedigree merit this was again another Neptune N4 son that we considered keeping. The dam of this lot is also the dam of stud sire Raff Marshall M82. R589 scanned very well in March. Note that all bulls are again be scanned 4th August for direct raw data comparison. His dam has 8 calves recorded and still sound and active in herd.

## COMMENTS

This is a good all-round beef bull with a pedigree dominated by the Doris cow family that was one of four families that founded the stud in 1965. These Napoleon sons have extra softness of skin with kind natures. Their daughters will be feminine and productive. Despite having her tail chewed off by a dingo when in Queensland this lots dam has now 9 calves recorded and still going strong.

# 53 RAFF MARSHALL R626sv

ID QRFR626 | DOB 30/11/2020 | AMFU,CAFU,DDFU,NHFU | HBR

## COMMENTS

Marshall R626 has always been a little more standoffish when compared to others – like mother like son! With his frame, mobility and personality he's ideal for the big paddock where they have to be a little tougher. The youngest spring bull to sell he is right up there with his weight for age. Dam has had 8 calves for a 382-day calving interval.

## COMMENTS

This is a high-quality beef bull with muzzle strength, depth of hindquarter with docility. He is one of the better-balanced bulls in the autumn group. His raw performance from scanning in March was some of the best. He had a big weight, big EMA, higher fat depths and excellent IMF. At the bottom of each pedigree were show cows from our 2010-2012 campaign – Raff Doris F304 and Raff Burnette D35. Dam has had 4 calves for a 361-day calving interval.

## Auction

### Management Group 2

Selling through the ring by open cry auction on-property at "Mundibulanga", 641 Moores-Bice Rd. DRILLHAM Queensland and interfaced with Elite Livestock & AuctionsPlus platforms.

### Sale lot breakdown

Lots 54 -113  
60 x 17-19-month-old spring 2020 born bulls

### Health Treatments

All lots have tested PI Pesti Virus FREE.

They have received a Tick Fever vaccination and have been Pestiguard & 7in1 vaccinated.

Early May, prior to being transported to Queensland, they received a Cydectin Pour-on drench, Multimin and HyB12 health treatment. Mid-July they had a second drench pour-on for lice prevention.

**Please note that these bulls have been run in one management group since weaning through to sale day. Their raw data can be directly compared between others for performance comparison.**

Video footage on sale lots can be viewed at [www.raffangus.com.au](http://www.raffangus.com.au)

## COMMENTS

Lots to like in this lot with one of the most expressive muscle patterns and as high a yielding beef body shape. Born easily he is yet again another lot that will produce progeny that will make money for all sectors of the industry – cow/calf operator, backgrounder, feed-lotter and processor. They will grow fast, weigh heavy, be efficient converters (NFI-F) and produce big carcasses that have high yields. Dam has had 4 calves for a 367-day calving interval.

## COMMENTS

One of the best. Raff Paddington S151 was number 1 within the autumn group of bulls for EMA size when scanned in March. Go back one more generation on his maternal side and there is the mother of Raff Empire E269. We have proven that weight is king – look at the growth, carcass weight and yielding potential of this lot. That's where the profit is. He has real performance with an excellent muscle definition with butt shape for a bull of his age.

## COMMENTS

You won't miss this bull when you walk into the viewing pens as he is magnificent. Considered one of the longest bulls in the sale with tremendous neck extension and docility. He has a slight variance in his pedigree with the Eclipta cow line introduced into our herd from Banquet in 2003. With Hoff, O'Neills, United Kingdom and Raff Empire E269 also in the mix this lot has power and predictability. Dam has had 3 calves for a 369-day calving interval.

## COMMENTS

Another standout. Magnificent head, length of hip to pin and tremendous weight for age in this lot recording the 2nd heaviest weight within his contemporary group when scanned in March. Further he had the equal 2nd largest EMA combined with even fats and very even coverage. This bull is a beauty with a great pedigree. He is another lot that excels for NFI-F indicating he is expected to eat less feed per day, relative to his weight and rate of weight gain.

## COMMENTS

The first son of feature sire Raff Napoleon N327 representing the largest sire line draft selling in this sale. We are delighted with them as they are all free moving, loose skinned and heavy weighing. S141 is magnificent, just like his father, with a tremendous raw data spread. He has a masculine head, extra capacity and spring of rib with hindquarter depth. They will be born easily as all seven calves from his dam were born slippery and smaller than average.

## COMMENTS

Here is one of the powerhouses within this autumn draft. He has always carried more weight, being the heaviest at scanning in March, and expressed more muscle. His dam always produces calves born easily that then grow like the grass does on King Island – quickly!! There is no doubting he will improve weaning weights and produce big carcass weights with much higher yielding percentages. This is a bull that also excels for NFI-F indicating he is expected to eat less feed per day, relative to his weight and rate of weight gain.

## COMMENTS

Another Lethal Weapon grandson with plenty of growth and muscle. He is smooth bodied with good spine strength with an easy doing constitution. In March at scanning this bull combined muscle size really well with fat depth and IMF%. We are aiming to increase our MSA Marble Score on actual carcasses but aim to do it without affecting growth, muscle, carcass weight, yield and NFI-F – this is the challenge. Dam has had 5 calves for a 362-day calving interval.

## COMMENTS

A bull with a great skin type that is full of red meat with depth of hindquarter and a tight sheath – he is all carcass. His pedigree is a good match up. His dam is double bred on carcass quality whilst his sire is dominated with big boned, heavy weighing genetics that will produce high yields from a carcass standpoint. Weight pays and this bull will produce plenty. Dam has had 3 calves for a 349-day calving interval.

## COMMENTS

Tremendous length and strength of spine in this bull. He has great capacity and muscle expression being a bull that oozes quality from all four corners. This lot's dam was one of Cherylton Stevie's bigger volume daughters. She had massive depth of body just like her mother of which all were good milkers also. Dam has had 6 calves for a 367-day calving interval.

## COMMENTS

A young bull that will mature into a massive individual. For his sheer volume he is smooth fronted with good spring of rib and hindquarter depth. It's nice to have the Doris cow family dominate a pedigree. This line was one of the founding females from 1965 – 47 years ago. The dam of S89 is still active and sound – just like her grandmother who lived through to over 20 years of age. His highly fertile dam has had 7 calves for a 363-day calving interval.

## COMMENTS

This is the number 1 bull in the sale for growth and carcass weight. Add outstanding yield, milk and NFI-F qualities and he becomes very special. Further, he is one of the quietest bulls offered. Do not discredit him because of his birth weight EBV. He was born easily and unassisted and with the neck extension and smoothness of shoulder such as his he will not cause trouble – trust us and our program. Weight pays and he will produce plenty.

## COMMENTS

Visually an easy doing type this is a lot that's hard to fault. He has great balance and body shape with good strength of spine behind his shoulders. His dam is a beautifully bred cow out of a flush siter to past stud sire Raff Lieutenant L140. This lot is a very good beef bull who has loads of genetic punch but he himself is easy care and not an extreme frame sized individual. Dam has had 4 calves for a 372-day calving interval.

## COMMENTS

A very soft and deep bodied young bull with general smoothness. The dam of S169 is magnificent. With an attractive phenotype she is square set, easy doing and is backed by a long line of cows that live long. Introduced from the USA in the mid-1980s this Duchess line are renowned for their structural integrity and longevity. Whilst the male progeny of S169 will be good be sure to keep his daughters as they may well be better.

## COMMENTS

This is an outstanding individual with massive performance and one that we very nearly retained. His dam has bred magnificently. Her 1st son sold to Wallangra Angus in Queensland, her 2nd son we used within herd and her 3rd son was sold to extraordinary cattle producers Charles and Cass Kimpton at Glenthompson Victoria. Raff Performer S293 is her 4th son. Obviously, his dam Raff Dream L174 is now a donor cow following her 6th calf with a 367-day calving interval.

## COMMENTS

S170 has extreme looseness of skin not often seen in Angus bulls nowadays. He is soft as butter with great body depth and a strong sires head. His dam is on my short list to breed a stud sire from whilst his grandam was just as good. She was a past donor cow for ourselves and Bulliac Angus whom we purchased her off. Be sure to keep his daughters as they will be fertile and attractive.

## COMMENTS

Raff Napoleon S292 scanned with one of the higher IMF% with a very high IMF fleck score of 5 within his autumn group. Combine this with his NFI-F that indicates he is expected to eat less feed per day, relative to his weight and rate of weight gain makes him a high-quality future sire. Maternally Raff Blackbird G296 is a flush sister to the \$18,000 first Raff Empire daughter to ever sell. He is very calvy, with good frame, mobility, a strong bone structure with body depth.

## COMMENTS

This is the youngest bull to sell in the sale. He has good length of hip to pin, depth of body with a good front shoulder structure with neck extension. He has a really good genetic combination with three of the four Hoff Scotch Cap cows we purchased in 2016 within it. Born easily this highly fertile young bull will mature with good frame and a sensible mature weight. Dam has had 3 calves for a 373-day calving interval.

## COMMENTS

Tremendous looseness of skin in this lot with loads of good-looking cows in his pedigree. He has well hooded eyes with that traditional strong Angus bull head with forearm strength. Jovial S104 has been a solid performer ranking within the top handful within his autumn group for weight for age and muscle combined with an IMF% scan of over five when just 12 ½ months. Dam has had 4 calves for a 370-day calving interval.

## COMMENTS

This lots sire was born in 1979 – 43 years ago – and is the sire of dad's most dominant show cow of her time and breed matriarch Forbes Burnette A22. Always open to taking a 'genetic step back in time' we retained a brother and used him in autumn on the larger framed heifers. Pedigree uniqueness aside fertility, calving ease and increased softness are the big benefits to using this bull. Dam has had 2 calves for a 378-day calving interval.

## COMMENTS

The sire of S10 was born 44 years ago, matured to weigh over 1100kg's and has near 2000 progeny recorded in Australia. Of all bulls born in America in 1978 or earlier he was the most widely used sire in history. With these great breeding bulls of past decades now ignored we thought it time to reintroduce their pedigree merit back into these modern lines. Keep his daughters.

## COMMENTS

Tremendous top and muscle expression in this bull. He is all nuts, butts and beef. He didn't like the look of a horse when he first saw one when arriving in Queensland so just be mindful of this. His dam ironically is one of the quietest M females we have. Dam has had 5 calves for a 365-day calving interval.

## COMMENTS

A very strong performer combining muscle with softness and weight. He recorded the equal 2nd highest IMF% scan within his group. His maternal grandam Raff Lady Durham J293 was a phenotypically ideal donor cow that sold well at last year's Spring Celebration sale. We have used three sons from her. S29s dam has had 3 calves for a 367-day calving interval.

## COMMENTS

There is some growth in this lot – ideal for the backgrounders, bullock producers and feed-lotters. Born easily and unassisted Popeye S42 progeny will have extra neck extension and frame size. His dam is a lovely wedge-shaped female. Dam has had 4 calves for a 359-day calving interval.

## COMMENTS

Should be well suited for the use on heifers. Again, this lot excels for NFI-F indicating he is expected to eat less feed per day, relative to his weight and rate of weight gain. His sire developed into a massive mature bull of his time with a weight of 1,130 kilograms - in 1998-99 he had more than 2,750 daughters in production in the US. Dam has had 2 calves for a 383-day calving interval.

## COMMENTS

Some perceive our cows to be too big despite having never viewed our herd. This bull's dam highlights such misperceptions. She is moderate in frame but has that extra neck extension and smoothness of shoulder our cows are renown for. S55 should be well suited to use on heifers. Dam has had 2 calves for a 372-day calving interval.

## COMMENTS

We always keep an eye on what pedigrees have big impacts in other herds so with the obvious genetic impact that this lots sire, Crusader of Stern had in the Millah Murrah Stud we felt it appropriate to inject a little of it into our herd. Used lightly we have just two sons selling. He should be well suited for the use on heifers.

## COMMENTS

A heifers first calf from a sire who few bulls could match for his genetic influence he has had within the Angus breed in Australia over earlier decades in the quest to increase marbling potency. Penned sale day on his own simply because he somehow ended up in the spring R bull group when arriving in Queensland and now not wanting to upset his correct contemporary group.

## COMMENTS

S194 contains well proven genetics on his maternal side for calving down progeny slippery at birth with vigour. This bull himself scanned the highest IMF% of all bulls with a very high IMF fleck score of 5 within his autumn group. He is a bull that should be suitable for heifers with his progeny destined to carry a little more carcass quality in marbling. Dam has had 3 calves for a 379-day calving interval.

## COMMENTS

The only son to sell by Poundmaker who was moderate in frame yet ideal in body type. His dam, Blackbird J173, was a past donor cow selling as the top priced female at last year's Spring Celebration sale to Llandarlo Angus of Cudgewa Victoria. Without question she was considered by myself as being one of the absolute powerhouse cows in this modern era of Angus breeding. Dam has had 2 calves for a 378-day calving interval.

## COMMENTS

Raff Pedro S208 is another lot that excels for NFI-F indicating he is expected to eat less feed per day, relative to his weight and rate of weight gain. If you want progeny with the ability to add extra coverage then he may well suit. Interestingly his dam when ultrasound scanned as a heifer had near double the fat depth compared to her contemporaries. She has had 2 calves for a 373-day calving interval.

## COMMENTS

His dam Raff Lady Durham M140 is a powerhouse. She has extreme length with strength of spine and extraordinary hip to pin length and pin set width - we have used a son. Look at the weight for age potential on this bull. He excels for NFI-F indicating he is expected to eat less feed per day, relative to his weight and rate of weight gain and he is destined to produce big carcasses with big yields.

‘During the past decades we, like many Angus seed-stock breeders, have been under immense pressure to use high performance ‘paper’ cattle for the perception to ‘maximise genetic gain and improve carcass quality’. We have refused to follow that trend because we have not been prepared to sacrifice those traits we believe important - genetic diversity, real growth with efficiency, actual calving ease, muscle definition with expression, heavy carcass weights with yield backed by actual carcass data, animal shape with capacity and soundness of structure.

As a result, we have a herd of Angus cattle that are genetically different and phenotypically unique.’

\* The percentile bands represent the distribution of EBVs across the 2020 drop Australian Angus and Angus-influenced seedstock animals analysed in the July 2022 TransTasman Angus Cattle Evaluation .

*‘Nothing is more heritable than the power to reproduce stock. Regular breeders are, as a rule, good milkers; breeding and milking go hand in hand. The cows of these families go on breeding year after year; the bulls are also good servers and getters.’*

- Dr Clement Stevenson - Pioneer of the AberdeenAngus breed in Scotland.

# M & K Moffatt Transport
