

LOT	ID	COMMENTS
1	QRFJ195	<p>Sells with spring bull calf at foot - Raff Megahit R568 born 23/10/20. PTIC to AI sire J &amp; C Appeal A10 to calve 19/09/21 or to paddock joining Raff Napoleon N327 the following cycle - ultrasound ageing put foetus in between the two? This cow is very smoothly made with good neck extension, strength of spine and udder shape. Her sire is a three quarter brother to Hoff Limited Edition, her maternal sire is one of Banquets best with maternal dam, Raff Doris W10, the mother of popular AI sire of his time Raff Midland Z204. Loads of maternal promise in this package.</p>
2	QRFL54	<p>Sells with spring bull calf at foot - Raff Scotch Cap OB45 R471 born 10/10/20. PTIC to paddock joining Raff Napoleon N327 to calve late October. Past donor cow. She was flushed just the once giving 14 eggs of which 10 were transferable. This is a phenomenal cow stacked with maternal greats and powerhouse sires. She is a super heavy weighing cow expressed from her body length, capacity and sheer volume - whilst big she shows no sign of extremity in frame size. Super docile in nature this is a cow you can do so much with.</p>
3	QRFJ293	<p>Sells with twin spring bull calf at foot (heifer calf fostered off) - Raff Noddy R548 born 20/10/20. PTIC to AI sire Raff Ultimate U27 to calve 16/10/21. Past donor cow. She was flushed just the once yielding 5 embryos. We have seen Raff Empire E269 daughters highly sort after at the Ben Nevis sale and I would like to think this lot deserves similar attention. Her maternal lineage combines the greats of the industry from several decades ago. Three sons have been used in our program. Her first was Raff Magnum M165, a big statured and heavy weighing \$17,000 high selling bull at the Sydney Royal Angus Feature Show several years ago. Her second - Raff Prancer P234 - is an embryo brother to Magnum M165. Her third is an absolute ripping son by Denmark sire Sondergard Fred. This bull, Raff Quigley Q174, expresses phenomenal phenotype and muscle expression and was used on heifers this autumn joining season. This is a high value 3 in 1 package - not only is her bull calf at foot a cracker her in-utero pregnancy will be even better. We would be keen to get some embryos back if there was a chance.</p>

4	QRFJ173	<p>Sells with autumn bull calf at foot - Raff Prancer S147 born 17/02/21. Depastured with Raff Panther P117 03/05/21 to 15/06/21. Past donor cow. She was flushed four times to average 4 transferable embryos per flush. I believe without question that this lot would be one of the absolute powerhouse cows in this modern era of Angus breeding. She is very docile and smooth fronted with extreme length, volume and shear capacity - cows like this are now all but impossible to find. Her pedigree is just as powerful. I've often said that her dam Blackbird F14 was my once in a lifetime cow - she too was a heavy weighing and superbly feminine cow big in stature imported as an embryo from the Hoff Scotch Cap program. She produced our well proven sire Jovial J350. The sire of J173 - Raff Franco F153 - had as much muscle expression and natural thickness that we have seen in a British bred bull with an EMA of 148sq cm. This lot will carry any of the breeds modern sires. We are delighted to offer such a cow to the industry. We would be keen to get some embryos back if there was a chance.</p>
5	QRFK129	<p>Sells with autumn bull calf at foot - Raff Performer S181 born 20/02/21. Depastured with Raff Prancer P234 03/05/21 to 15/06/21. Past donor cow. She was flushed three times to retrieve 72 eggs of which 26 were transferrable. Go steady on the stimulate drug as one flush yielded 58 eggs. Raff Doris K129 is a genetic masterpiece with generations of built in longevity, docility, structural integrity and do-ability. Whatever we have bred her too she produces the goods - we have used a son with two more destined for stud duties next season. Her dam sells as lot 28. Her sire sold for \$30,000 at our 2012 bull sale when weighing 936kg at 20 months with an EMA of 130sq cm. Raff Doris K129 is worth serious consideration. We would be keen to get some embryos back if there was a chance.</p>
6	QRFK43	<p>Sells with autumn bull calf at foot - Raff Paddy S180 born 20/02/21. Depastured with Raff Pedro P163 03/05/21 to 15/06/21. This is a magnificent Raff Empire E269 daughter that has a very attractive side profile, great neck extension and shoulder profile with excellent milking qualities and great skin type. Her dam is an embryo import flush sister to Raff Dictator D364 - a 64 inch, 1400kg used sire. Two sons of Lady Durham K43 have been used for in herd stud duties. Her first son, Raff Neptune N4, was sired by genetics from Denmark. Her second son we used, Raff Panther P117, was sired by an import sire from the United Kingdom. Both are powerful bulls with tremendous muscle expression. Her calf at foot is a 3/4 brother to Neptune N4 and looks himself to have stud sire potentials. This is a magnificent 3 in 1 package. We would be keen to get some embryos back if there was a chance.</p>

7	QRFL17	<p>Sells with autumn bull calf at foot - Raff Performer S117 born 12/02/21. Depastured with Raff Panther P117 03/05/21 to 15/06/21. Raff Burnette L17 is an attractive and highly fertile cow so impressive for her capacity and rib shape. She is big footed with strong bone, muzzle and jaw strength with big ears - take the time to look at her back end hip to pin shape. Her dam was one of our show females when we had our three year take our cattle to the people show campaign in 2010 - 2012. Her Internationally used sire was part of that campaign claiming Grand Champion Angus Bull and 3rd Interbreed placed at the 2012 Beef Australia event when he weighed 1274kgs. He sold at our last sale in Queensland for \$25,000 - sons have since topped at \$24,000. I have a lot of faith in the breeding potential of this wonderful lot.</p>
8	QRFN124	<p>Sells with autumn bull calf at foot - Raff Pedro S20 born 31/01/21. Depastured with Raff Power P43 03/05/21 to 15/06/21. If you are chasing phenotype and do-ability without extremities then this lot must be considered. She is beautiful. When sorting through the N drop females there were a number of United Kingdom genetic types to select from but we simply keep coming back to this female because of her superb phenotype, kind nature, all round completeness and superb femininity. With two calves at a 350 day interval and cycling quickly for her third she is already proving highly fertile. Her pedigree contains the well proven carcass AI sire Stewie D19 along with Scotch Cap and the heart of Raff Angus maternal lines. Her bull calf is a cracker.</p>
9	QRFM64	<p>Sells with autumn heifer calf at foot - Raff Burnette S300 born 24/03/21. Depastured with Raff Napoleon N327 03/05/21 to 15/06/21. This is another well balanced and easy care type female being a half sister to the previous lot. We have included several lots a little more moderate in frame to suit the current breed preferences however these types catalogued do continue to offer outcross maternal lines that stem from heavy weighing and big capacity types. Maternal strength underpins the success of any breeding program and this pedigree displays such. Take the time to go back generations as it only adds security to her ability to breed progeny that will breed on. Her young heifer calf is very stylish both square set in stance and topline. Be sure to note that she is in calf to our stud sire selling as lot 32.</p>

10	QRFP415	<p>Sells with autumn heifer calf at foot - Raff Moriah S3 born 24/01/21. Depastured with Raff Napoleon N327 03/05/21 to 15/06/21. No Australian genetics within this lots pedigree. Instead she has the blend of two of the most famous and dominant herds in America - SAV Angus and Hoff Scotch Cap. Her dam resulted from an embryo we imported from South Dakota after the purchase of Hoff Moriah 822 as the third highest priced cow and their dispersion sale in 2006. She was an absolute powerhouse and would have frightened most for the cow that she was - we loved her. Her sire - SAV Sensation - contains the two most influential and high dollar earning cows within the Schaff herd. Moriah P415 is a very wedge shaped female raising a really impressive daughter sired by Shady Brook Explorer 015. She to sells joined to our lot 32 stud sire.</p>
11	QRFE309	<p>Sells with autumn bull calf at foot - Raff Paddy S232 born 01/03/21. Depastured with Raff Pedro P163 03/05/21 to 15/06/21. Past donor cow. She was flushed twice to average 7 eggs per flush. This is an amazing opportunity to purchase one of only a handful of remaining direct Hoff Scotch Cap import females. These genetics are well proven. Her dam Hoff Blackbird 5217 has dominated in our herd with her genetic influence seen in most successful breeding females. Her full sister is the dam of Raff Hercules H411 who has seen international AI use. This Blackbird female has a wonderful silky and subtle skin and just oozes of maternal qualities. You could have a lot of fun choosing sires for her.</p>
12	QRFJ78	<p>Sells with autumn bull calf at foot - Raff Napoleon S127 born 14/02/21. Depastured with Raff Prancer P234 03/05/21 to 15/06/21. Shown as a heifer when the national youth roundup was held in Queensland a number of years Duchess J78 has matured to express extra bone standing on big feet with forearm strength, extra volume and hip to pin shape. Heads like hers are getting hard to find - strong in muzzle shape with wide eye spacing and big ears sitting where they should be - no poppy eyes and piggy ears in this lot. She is extremely docile and will carry any modern AI sires. Her bull calf at foot is looking impressive.</p>

13	QRFL99	<p>Sells with autumn heifer calf at foot - Raff Duchess S183 born 20/02/21. Depastured with Raff Panther P117 03/05/21 to 15/06/21. Past donor cow. She was flushed just the once retrieving 2 A Grade embryos for two pregnancies. Doris L99 is genetically dominated by animals personally inspected or bred ourselves. She again has that smoothness of shoulder with neck extension we strive for in our females. Her sire was used for three breeding seasons yet still recorded an impressive 7.2% IMF scan and was noted for his extreme fine fleck. His dam, Doris D48, is considered one of our best Limited Edition donor cows faultless in phenotype - she was out of a flush sister to the highly used Raff Midland Z204 AI sire. The calf alongside Doris L99 looks magnificent and I believe will mature into an outstanding female. She's well worth a bid just to secure the calf.</p>
14	QRFD160	<p>Sells with autumn bull calf at foot - Raff Napoleon S281 born 17/03/21. Depastured to Raff Pedro P163 from 13/05/21 to 15/06/21. Doris D160 is an amazing mature cow whose dam is the direct mother of both show and breeding sensation Raff Empire E269. Now 13 years old she is still holding her tremendous weight and is a massive girthed cow with so much natural capacity and shape. Her sire Hoff Limited Edition needs no introduction. I hope this wonderful matron goes straight into a flush centre.</p>
15	QRFM189	<p>Sells PTIC as spring calver to AI sire Scotch Cap (USA14) to calve 19/09/21. Pedigrees cannot get much better than this. Phenotype with over the scale performance dominate from every corner. M189 is very attractive, has extreme hip width with length and she weighs heavy. Her sire has been one of the most consistent breeding sires for us. After many seasons with us he now resides at Milong Angus Stud Young NSW for further stud duties. Her dam is very similar in type with her grandam commented within the pedigree of lot 13. Her spring heifer calf has been retained with her genetics accessible through other females on farm - hence why we are offering such an amazing cow.</p>

16	QRFJ331	<p>Sells PTIC as spring calver to AI sire Gardens Wave to calve 27/09/21. Past donor cow. She was flushed just the once retrieving 3 A Grade embryos for three pregnancies. This cow is a full sister to the dam of Raff Napoleon N327 who sells as lot 32. J331 is as soft as butter with so much natural fleshing. She attracts the attention of all who have laid eyes on her. Again her muzzle and jaw strength follow through to big ears, big capacity and wide topline with tremendous weight bearing qualities. We are only selling her because of her full sister remaining in herd and due to the intention to use her ONeills Prime Star 80 son born spring last year - two sisters to this bull are magnificent. Her pregnancy to Gardens Wave will be very interesting.</p>
17	QRFG324	<p>Sells PTIC as spring calver to Raff Napoleon N327 to calve mid-September. This is a beautifully made and superbly natured cow so different in pedigree to mainstream. In fact there are only 17 Shock n Awe animals in Australia. Dad personally inspected him in the United States many years ago and he was magnificent. Unfortunately his semen was not the best hence he saw limited usage. Have a look at the maternal pedigree of this lot. Premier Julie was imported as a live female by Dad in the mid 1980s with progeny starting the Duchess line. The sire of Burnette K33, Hoff Rafferty, was also imported live by Dad then go back another generation and you find Premier Commodore was also imported live by Dad. The last maternal cow Sarum Burnette 10th - just seven generations back - was one of the first of four cows that made the foundation at establishment in 1965. Perhaps this lot truly defines our 'Celebration Sale' and showcases unconditionally my fathers dedication and both financial and genetic investment to the breed.</p>
18	QRFQ365	<p>Sells PTIC as spring calver to AI sire RR Scotch Cap 9440 - due 27/09/21. This is a massive weighing heifer excelling for femininity, growth and absolute power. If you liked the Hoff Scotch Cap Angus program but missed out using their genetics then here's your chance. Three of the four corners of her pedigree are 100% Hoff, the fourth - her maternal dam is sired by a Hoff embryo import. Further she is PTIC in calf to more Hoff genetics. We saw amazing genetic advantages from our 2006 purchases at their dispersion sale so don't you miss this opportunity. Raff Lady Durham F94 is a full sister to used sire Raff Emperor E106 and Raff Ego E266 is a full brother to our once in a lifetime cow Raff Blackbird F14. Not much to lose but so much to gain in this lot.</p>

19	QRFQ410	<p>Sells PTIC as spring calver to Raff Queenmaker Q205 - due mid October 2021. This is a really nice rising two year old heifer. We have always said that the strength of your maternal lines underpins the success of any breeding program. There is a little more moderation in her makeup and individual type but when weighing over 600kgs at 21 months she can't be considered small. Her sire was a smooth bodied sire with an expressive muscle pattern. Her dam has a bit of punch in her pedigree with Raff Distinction being a Hoff embryo import along with the sire of Raff Empire E269 featuring. Her pregnancy just adds more maternal strength as aptly named joining sire - Queenmaker - we expect some outstanding daughters to be made.</p>
20	QRFQ412	<p>Sells PTIC as spring calver to Raff Quartz Q113 - due Oct/Nov 2021. This is a super stylish heifer with a different but cracking pedigree. If you look at her birth EBV and discount her immediately then I say it is a tragedy of the system and a loss to the industry. Instead have a look at her front end profile - long clean and very smooth. Further have a look at her back end profile - extra length of hip to pin and width of pins themselves. Her paternal sire was imported by us as an embryo from the United Kingdom. Her paternal dam stems from the great Merrigrange Jestress cow. Her maternal sire Raff Empire E269 needs no introduction. Her maternal dam contains more genetics personally inspected and imported by us from the United States. This lot is an impressive and free moving female with shape, weight and style.</p>
21	QRFQ491	<p>Sells PTIC as spring calver to AI sire S Chisum 255 - due 23/09/21. I eagerly anticipate the arrival of this calf. The art of breeding is about blending genetics and sometimes using sires that you don't want you herd to fully replicate but use to add the unique qualities of that individual to balance extremes without losing ultimate drivers of profitability - that being weight. This female has loads of growth and tremendous weight for age. The use of Chisum will add a little more shape and muscle expression. On pedigree Q491 is sensational. Her sire has been the cornerstone of our program since moving into a grass fed production system with progeny all of a type with built in structural integrity and natural do-ability. Her dam has some greats excelling for growth and weight. I really like this heifer.</p>

22	QRFR29	<p>Sells as autumn calver joined to AI sire Raff XFactor X3 AI'd 11/05/21. Paddock joined to Raff Quigley Q174 21/05/21 to 15/06/21. This young heifer has lovely neck extension and head carriage with a little more frame size compared to the following heifers that sell. We look forward to the day when Feed Efficiency gets recognition and becomes a key trait of importance. The irony is at the moment that if your cattle are reported favourably for NFI you generally have them reported poorly for calving traits and poorly for fat and IMF. All in her pedigree were born easily and every animal with her genetics that have been processed these past years have met fat specifications from a carcass stand point with marbling.</p>
23	QRFR123	<p>Sells as autumn calver joined to AI sire Minerts Fortune 2000 (USA691) AI'd 11/05/21. Paddock joined to Raff Randy R106 21/05/21 to 15/06/21. We will have these autumn joined females preg tested before sale day - either way the anticipated calf from either will be genetically unique. Our breeding program is very comfortable to take one step back in time - by using old proven genetics - to take two steps forward. This is a young heifer with a nice nature and natural length. There is a little more carcass preference in her pedigree with most pedigree corners moderated in frame. If you are wanting a varied pedigree with limited extremities throughout then this lot should suit.</p>
24	QRFR140	<p>Sells as autumn calver joined to AI sire S A V Bandolier 1916 AI'd 09/05/21. Paddock joined to Raff Quigley Q174 21/05/21 to 15/06/21. This heifer has as placid and kind a nature as you could want carried through from all three cows on her maternal side. One of them Raff Duchess H236 has even had a son used within herd here with his autumn born progeny absolute crackers. R140 is very square set, always standing with a wide base. She is a real beef machine expressing natural thickness from tip to toe - with softness. Again her pedigree contains loads of Hoff Scotch Cap genetics with a touch of United Kingdom. Her pedigree is bullet proof and a young female I know many will like.</p>

25	QRFR168	<p>Sells as autumn calver joined to AI sire Forres Deek D62 (QRFD62+84) AI'd 09/05/21. Paddock joined to Raff Poundmaker P399 21/05/21 to 15/06/21. It is exciting for us to offer new genetics to the seedstock industry with this and the next two lots being the first animals to be sold by our new United Kingdom AI imports. This Powerhouse daughter is simply that - powerful. She is strong boned with plenty of growth and weight bearing qualities. We chose to join her to an old VPI Lord Patriot son by AI to balance key traits so hopefully she sticks. If not be sure to note that her paddock joining sire is a direct son from sale feature female selling as lot 4.</p>
26	QRFR180	<p>Sells as autumn calver joined to AI sire Raff Explosive E108 AI'd 10/05/21. Paddock joined to Raff Poundmaker P399 21/05/21 to 15/06/21. Her sire Idvies Eric was the sire we used a little more of when compared to both the previous and next lot UK AI sires as the owner of him specifically purchased Eric to use on Netherallen Peter Pershore daughters - genetics of which we have plenty of. Don't dismiss this heifer because you don't know much about the genetics within - whilst there are no Raff maternal lines we know there is some serious punch within. Her maternal dam Raff Lady Durham D240 is a full sister to our Hoff embryo import sire Raff Dallas D216.</p>
27	QRFR216	<p>Sells as autumn calver joined to AI sire S A V Bandolier 1916 AI'd 09/05/21. Paddock joined to Raff Poundmaker P399 21/05/21 to 15/06/21. Had submitted a sample for DNA testing but it failed on quality so will have another resubmitted before sale. Really wanted to offer a Jumbo daughter as we are really excited by his progeny - take the time to look at him as he is a real beef bull with bone, muscle and softness. We have already used two sons from him with a daughter one of the years best. Her two maternal sires Stewie and Fortune have extra carcass quality.</p>

28	QRFE12	<p>Sells as autumn calver paddock joined to Raff Pedro P163 from 13/05/21 to 15/06/21. Past donor cow. This magnificent matron was flushed six times yielding 116 eggs of which 60 were transferrable. If there is anyone looking to buy a well proven foundation cow that will set up a strong maternal line for many decades to come then be sure to bid up to buy this wonderful Angus cow. Two of the mainstream modern high performance paper Angus cows would fit inside her. She has an absolutely beautiful nature, with a kind eye and so much capacity - with tremendous weight. We think so highly of her sire that we have been using him again recently by AI. Her dam had a full brother exported live to Thailand. Her grandam Doris S128 lived until over 20 years of age retiring still with absolute structural integrity. If she calves down then pull the calf off to give it a feed - her milking ability has been compromised from a mastitis infection - then send her straight to a flush centre. We would be keen to get some embryos back if there was a chance.</p>
29	QRFF172	<p>Sells PTIC as spring calver paddock joined to Raff Panther P117 from 10/12/20 to 05/02/21. This cow has bred the house down and offers breeders the opportunity to purchase Raff genetics of absolute security with breeding predictability. Every sire you join her to will result in outstanding progeny. One son has been used here, another sold for stud duties with a third son selling as one of the highest performance bulls in this sale as lot 43. Her spring weaner heifer by Bando 5175, making her a 3/4 sister to Empire E269, is magnificent. Her pregnancy she carries will also be a thumper. Sensible in frame and ideal in phenotype this proven lot is well worth consideration.</p>
30	QRFG6	<p>Sells PTIC as spring calver paddock joined to Raff Panther P117 from 10/12/20 to 05/02/21. We had to include another Hoff Limited Edition daughter as he was truly a remarkable bull in our program. This cow is as close as you could get to the best of the old maternal lines. She is docile in nature and has proved highly fertile - we intentionally pushed her back to a spring calver. We have three very good daughters retained.</p>

31	QRFK127	<p>Sells PTIC as spring calver to AI sire Hoff Limited Edition SC594 AI'd 16/12/20 to calve 22/09/21. Past donor cow. She was flushed 4 times yielding 27 eggs. Imported as an embryo herself directly from the Oneills Angus herd in Iowa United States this cow really does offer the industry access to varied genetics. We have retained and used an outstanding son sired by Raff Danny Boy D207 with several daughters also retained. We have been following the Royal Lady line for many years and ironically met with Jim O'Neill when inspecting the Schaff program in 2006 whilst attending the Hoff Scotch Cap dispersion sale - his commentary on this maternal line resulted in our investment. Note who this lot is in calf to - will be interesting.</p>
32	QRFN327	<p>Used stud sire. With calves on the ground and more to come for both spring 2021 and autumn 2022 calving's we felt it appropriate to offer such a magnificent individual. He stands at 62 inches with a mature weight of 1246kg and scrotal of 43cm. Napoleon has tremendous depth of body with a strong sire's head, a true sire's presence combined with excellent docility. For a bull with such mass, he carries himself with ease on sound foot and leg structure. His sire is Raff Empire E269 - a 10th generation Raff bred bull that traces back to our foundation cow, Sarum Doris 19th purchased in 1965. During his show career Empire clocked up over 28,000 kilometres in trucks going to shows throughout the country where he won eleven Inter-breed Supreme Beef Exhibit of the Show titles. His dam oozes of maternal qualities with a soft skin, extra neck extension with smoothness of shoulder and an excellent udder attachment with ideal teat placement – she recorded the equal highest IMF% scan of 8.1% within her contemporary group of 171 heifers. She is a full sister to lot 15.</p>
33	QRFQ282	<p>Three corners of this lots pedigree contain the Hoff Blackbird genetics that we purchased at the 2006 Hoff Scotch Cap dispersion sale. Maternal dam, Raff Lady Durham F94, is an embryo full sister to past stud sire Raff Emperor E106 who had forearm strength, a really strong and well hooded head type and extra pin width. Q282 is a free moving bull with good back end width along with extra length of hip to pin.</p>

34	QRFQ296	<p>This is the first of a number of direct sons selling by our United Kingdom embryo import sire Raff Lethal Weapon L156. The dam of Q296 is a moderate framed type but of big capacity with extra spring of rib who has recorded 5 calves for a 375 day calving interval. Q296 is an individual with presence. He has good neck extension with a tidy underline and has the genetic and individual qualities to improve frame size.</p>
35	QRFQ298	<p>Loads of maternal presence in this lots pedigree and a bull of solid all round performance. Keep his daughters as there is not a bad cow in there. His dam has recorded 6 calves for a 368 day calving interval. Q298 is a deep chested sire with spring of rib. He tracks out well and is quite similar in body type to his half brother selling as lot 33 but with a little extra looseness of skin when compared to him.</p>
36	QRFQ301	<p>Three of our Hoff cows and the best of our Doris line right up front of this bulls pedigree. His dam is a solid and moderate framed female with 5 calves recorded for a 367 day calving interval. Q301 is a tremendous yet compact beef bull with thickness of body with real muscle expression.</p>

37	QRFQ304	<p>The dam of Q304 is a magnificent past donor cow big in stature and heavy in weight. The Duchess cow family excels for longevity and structural integrity with Duchess F34 resulting from the mating between two live animal imports from the United States - Premier Commodore and Premier Julie. On pedigree we had shortlisted this lot for within herd use. Q304 is strong topped with smoothness of body. His progeny will be of high yielding.</p>
38	QRFQ306	<p>This lot has a really interesting and diverse pedigree and makes for a timely reminder that genetics not aligned or linked to the mainstream Angus always suffer from a science standpoint. Remember these spring bulls genetic brother steers were \$259 per head more profitable when compared Nationally when processed in June. Her dam has recorded 5 calves for a 371 day calving interval. Q306 has a great underline with smoothness of shoulder, a good hind quarter with jump muscle expression. He will be tough.</p>
39	QRFQ309	<p>Double bred to the magnificent breeding cow Hoff Blackbird 5218. This bull stems from a square set and thickly made female who has 5 calves recorded for a 374 day calving interval. Q309 is a sire with good head carriage, plenty of length and excellent mobility. You can just see in the bull himself that his progeny will be high yielding and highly efficient converters of grass.</p>

40	QRFQ314	<p>For those that like to follow pedigrees be sure to note that Raff Doris Z199 is a full sister to the highly used AI sire of past Raff Midland Z204. There is loads of power and punch in this suitably framed beef bull. Q314 is a super soft and thick set beef bull. He has a strong forearm with depth of body and masculine head. From birth he always showed good muscle expression and was an individual that took your eye when passing by him.</p>
41	QRFQ321	<p>We look forward to Feed Efficiency becoming a more utilized selection parameter when accuracies improve as this lot currently excels for it. His dam has the phenotype that we appreciate and is a cow we intend to use a son from one day - maybe even her last by Raff Neptune N4. She is long with a good skin and a beautiful temperament. Q321 has length of neck, is tight sheathed with good natural thickness and an expressive hindquarter.</p>
42	QRFQ322	<p>Plenty of weight for age, red meat, softness and carcass quality in this lots individual performance - a complete all rounder. His dam is a full sister to stud sire Raff Lieutenant L140 that left us with some good framed and well uddered types. Q322 is a rugged individual with again that good head carriage and neck extension that our cattle are well regarded for. He is free moving and very similar in overall body type for the typical Major M74 son.</p>

43	QRFQ327	<p>This is the heaviest weighing and highest whole of life daily gaining bull within the Spring draft of bulls selling. Averaging 1.49kg/day this powerful individual also measured the largest scrotal. Big weight gainers are often a little leaner but not this bull as his rump fat was equal second for recording extra coverage. If you are after docility with real hindquarter expression then look no further - he truly excels. No need to use a Euro when you have an Angus like this. Note that his fabulous stud sire producing dam sells as lot 31. Q327 is simply a magnificent individual and one of our best.</p>
44	QRFQ329	<p>Q329 measured the largest Eye Muscle Area when ultrasound scanned at 131 sq cm. This is a lot with a cracking pedigree containing phenotype with some really heavy weighing genetics. Note that the dam of his sire sells as lot 6. Q329 is a super smooth beef bull that tracks out well with a little extra body depth and well hooded eyes. This is a very good beef bull.</p>
45	QRFQ343	<p>If you need to add a little more fat coverage to your herd then this is the first of four lots within the Spring group that had the highest measurement at scanning - 14mm over the rump. Fat can have a negative effect on weight gain but not for this lot as his whole of life daily gain was right up there. His dam has 5 calves recorded for a 376 day calving interval. Q343 is a very long and strong topped sire with a tight sheath and tremendous neck extension with head carriage.</p>

46	QRFQ344	<p>A half brother to the last lot with equal rump coverage to him so again if you are chasing softness then be sure to look at him. His dam is a powerful and strong muzzled cow with heaps of depth and capacity. She has 8 calves recorded, including two sets of twins, for a 362 day calving interval. Q344 is a bull with good rib capacity and hindquarter expression. He carries himself well.</p>
47	QRFQ363	<p>One of the bigger Eye Muscle Area scanning bulls within the first 50 spring born bulls selling. Q329 descends from a line of animals with extra frame size - similar to himself. Of interest, his maternal great grandam produced our current top priced sale bull when sold for \$40,000 in 2012 to the Wilkinson Family at Guyra. Q363 is a future sire with magnificent presence with excellent body shape and smoothness. He is super free moving.</p>
48	QRFQ364	<p>This bull is one of the most complete all-round actual performance lots achieving a very solid daily weight gain combined with an IMF% scan at 7.1. It is rare to have a bull excel for weight for age yet boast a big IMF scan with a solid but not extreme fat coverage. We imported his maternal grandam from the ONeill program as an embryo - she now sells as lot 31. Q364 has extra depth of forequarter with capacity. He has a good front profile combined with back end width. A real herd improver.</p>

49	QRFQ367	<p>For those that believe weight is still the ultimate driver for profitability then this lot must be considered - length weighs and weight pays. Q367 is not only big in physical weight and daily gain but his progeny will produce carcasses heavy in weight and of high yields - efficiency at its best. There is no doubting that his calves will be born easily. His dam has 5 calves for a 367 day calving interval. Q367 is a big and rugged individual with extra length of body - he is extraordinarily long.</p>
50	QRFQ368	<p>His dam sells as lot 17 so be sure to read her comments as she is a beautiful Angus cow rich in the very best of maternal lines. We used her 'P' Raff Lieutenant son last season. She has had 8 calves for a 383 day calving interval with her calving date pushed back from June to September following our move south. Q368 has actual performance that is hard to fault. Q368 is a lovely loose skinned and free moving individual with good head carriage.</p>
51	QRFQ369	<p>This lot's maternal line are all of a kind with grandam, Burnette E116, being a past show cow and the dam of the magnificent lot 7 female that sells. Q369 is a thicker set Lethal Weapon son. He is very smooth and strong topped with length. There is no question that his body shape and type will produce progeny of high yields.</p>

52	QRFQ370	<p>A big performing Lethal Weapon son who, when scanned, weighed over 900 kilograms at just 22 months to be gaining one of the higher overall ADG weights within his contemporary group. His moderate framed and hard working dam has recorded 5 calves for a 373 day calving interval. Q370 is a bull with depth of body and an expressive hindquarter. He will mature to be muscular. This is a very good beef bull.</p>
53	QRFQ371	<p>There is loads of red meat in this high EMA scanning bull combined with above average fat scans and strong IMF%. His dam is a big milking and big volumed cow with his grandam being a full sister to past stud sire Raff Duke D367. His dam has recorded 5 calves with a 361 day calving interval. Extra body width in this lot. Q371 is deep sided and is a bull that's always stands wide based.</p>
54	QRFQ373	<p>Q373 comes from a maternal line of large framed females that all excelled for docility. We have never selected for fat as the trait for improving softness and carcass quality so, for us, when we see bulls like this lot excel for IMF% (7.0) at scanning with acceptable but not extreme Rib and Rump Fat we get excited. He is a good headed bull that will mature into a big framed and deep sided individual. He has nice looseness of skin and is free moving in his stride.</p>

55	QRFQ380	<p>If you have not made the connection yet then note that this lot's sire, Raff Mustang M106, is a bull that has a huge genetic capability to improve finishing capabilities. This lot recorded the highest fat depth at the Rib along with one of the highest Rump measurements. His pedigree contains well proven older genetics that breed on. Q380 has a compact body of beef with good spring of rib and a subtle skin type.</p>
56	QRFQ383	<p>Another son from our United Kingdom embryo import sire. This is a bull with really solid all round performance who comes from a maternal line that perform at the same consistent level year in year out. His dam is a very sweat headed and king eyed female with a nice side profile. This is a good bull. Q383 has tremendous body length and strength of spine. He also has a trim and tidy underline.</p>
57	QRFQ386	<p>A big Eye Muscle scanning bull who ranked in the top handful for its size. His dam is a large framed and good skinned female. Q386 has good head carriage and is a sire that tracks well. He will cover territory with ease.</p>

58	QRFQ394	<p>Be sure to note that this lots dam sells as lot 2 being a cow heavy in weight with tremendous length, strength of spine and neck extension. Also his sires dam sells as lot 6. Take the time to look at their photos and you will certainly then want to keep this bulls daughters. His pedigree contains some true maternal greats. Q394 has extra body depth and capacity who will mature to be a moderate framed and easy care type.</p>
59	QRFQ397	<p>It is rare to find cattle with even fat distribution. Whilst he is just the 1 millimetre off from being even he is as close a lot as we have listed in this sale for us to say that he is as smooth a finishing sire catalogued to sell this year. Further he recorded the highest IMF% scan of 7.3 within his contemporary group of fifty spring born bulls. His dam has 4 progeny recorded for a 368 day calving interval. Q397 is a super smooth bull will little wastage with a great head and outlook. His underline is very tidy.</p>
60	QRFQ419	<p>A wonderful genetic combination of Hoff Scotch Cap genetics within this lot. His dam is an embryo import and flush sister to past stud sire Raff Emblem E69. The dam of Q419s sire, Raff Blackbird F14, was the best of our Hoff imports - she was from a flush of what we consider the most potent breeding line we have ever produced. Q419 is a strong boned and proud sire.</p>

61	QRFQ420	<p>This is a strong performing lot. His dam, an Empire daughter out of a full sister to past stud sire Raff Duke D367, was an attractive individual with a soft and silky skin. She had 6 calves for a 360 day calving interval. Expect this lot to produce high yielding types. Q420 is a growthy and free moving bull with extra looseness of skin. Use him on moderate framed females that need a lift.</p>
62	QRFQ428	<p>Note that this lot was an outlier for his Rib and Rump fat scans so expect his data to become even more well positive once it is analysed. There are again some magnificent cows in his pedigree - most of good frame, all with excellent udders and teat shape. Five progeny recorded from his dam for a 370 day calving interval. Q428 is a uncomplicated beef bull with good body shape and capacity that tracks out well.</p>
63	QRFQ433	<p>Just like the last lot this Raff Mustang M106 son was also an outlier for his Rib and Rump fat scans so again expect his data to become well positive once it is analysed. Every daughter from this lot must be kept. His dam has 5 progeny recorded for a 373 day calving interval. Q433 is a very deep sided and soft bull. He is an easy fleshing and attractive individual with as nice tight sheath.</p>

64	QRFQ441	<p>This is an absolute classic highlighting without question that 'old' genetics are discredited by science. His dam was Junior Champion Female at the 2010 Brisbane Royal Show and matured into a magnificent, large framed and heavy weighing matron with 9 calves now recorded while still active and sound in herd here. At both the top and bottom of her pedigree there are as powerful an Angus animal as you could find anywhere. The sire of this lot contains similar Hoff genetics combined with one of the greatest of New Zealand sires ever. Q441 has a masculine head with good bone structure and body shape. He is deep chested with extra rib.</p>
65	QRFQ449	<p>One of the big daily gain bulls within the spring group who was averaging 1.31kg/day whole of life at scanning time. Again, for the pedigree enthusiasts, note that maternal grandam is a full sister to the successful AI sire of past Raff Midland Z204. Q449 is a free moving and rugged individual with excellent head carriage. He shows good length of hip to pin and will be one powerful individual when mature.</p>
66	QRFQ466	<p>A magnificent pedigree within this lots make up. His dam truly excels for docility and is as big a barrelled breeding female we have here on farm. Her dam, Starlette E216, was a show cow during our three year take our cattle to the people show campaign in 2010 - 2012. She resulted from an embryo we imported directly out of Hoff Limited Editions grandmother. This lots sire is royally bred also combining the best United Kingdom with another of our Hoff embryo import genetics. He is a real beef bull with big capacity and built in do-ability. He has a great side profile with thickness over his topline.</p>

67	QRFQ470	<p>Again this is a bull with the Blackbird cow family in two corners of his pedigree. His Doris line goes back to Raff Doris S128 who was an amazing donor cow for us. She stayed sound right through to retirement when over 20 years of age. Q470 has been one of the top weight gainers with again that extra softness inherited from his sire. Dam has 6 calves recorded for a 362 day calving interval. Q470 is a very proud and big volumed bull with extreme head carriage and neck extension. A powerful individual.</p>
68	QRFQ471	<p>One of the standout pedigree and performance sires in the sale. His ADG to scanning date was the 3rd highest. His EMA was the 2nd largest. He is of good frame with a big scrotal, good fat coverage and an impressive IMF%. His dam is a beautiful cow made up of three parts Hoff with Raff Empire E269 completing the rest of her pedigree. Q471 was a bull I had shortlisted to use however have a Jindra Megahit brother coming through that will be used. Dam has 5 calves recorded for a 374 day calving interval. Q471 has a great skin type with extra length of body and very smooth front end profile. His progeny will be high yielding types.</p>
69	QRFQ472	<p>This lot is made up of some well structured and thick set types with little risk of any extremities showing through in his progeny. They should all be attractive types. His dam has 6 calves recorded for a 362 day calving interval. Q472 is a neat bodied sire with and straight topline and tremendous shoulder profile. He has a really good muscle pattern with ease of mobility.</p>

70	QRFQ478	<p>Another top weight gaining bull within his contemporary group of spring born bulls gaining 1.32kg/day. His dam would be one of the larger framed Cherylton Stewie daughters we have - this has come from her maternal lineage as the next 3 generations are all big volumed and heavy weighing cows. Dam has 4 calves recorded for a 364 day interval. Q478 is a super free moving bull clean in his skin type and a bull that will appeal to many. Length weighs and he has plenty.</p>
71	QRFQ486	<p>A really well balanced performance bull here. His raw data information, all of which is provided in the sale catalogue and on our website, was sound in both his weight gain, frame size and carcass scanning results. Again the maternal qualities are outstanding within. Q486 is a wide standing and deep sided bull with good forearm and capacity through his middle. He is very attractive and has that looseness of skin that indicates he has plenty of room to keep growing. A very good bull.</p>
72	QRFQ487	<p>Don't discount this bull's breeding potency simply because of his maternal lines that go back from several decades of past. The extreme performance of his sire will surpass any breeding doubts. His dam has recorded 6 calves for a 364 day calving interval. Q487 is a bull with very little wastage. He has nice length with a strong top and superb body smoothness.</p>

73	QRFQ493	<p>This bull should be a very efficient feed converter with progeny excelling for weigh gain performance and their final carcass weights. His dam has huge capacity with extra spring of rib expressed. She weighs heavy, not extreme in frame size, so don't fall into the belief his daughters will be too extreme. Dam has 6 calves recorded for a 366 day interval. Q493 has loads of capacity with extra spring of rib. He tracks well and will mature into one powerful individual.</p>
74	QRFQ495	<p>There is no Raff maternal lineage in his pedigree, instead he is three parts United States and one part New Zealand. His dam was a beautiful big framed and docile female that resulted from an embryo we imported out of one of the four Hoff Scotch Cap females we purchased. There are not many direct sons left to come from these import cows as their time is running out. Q495 is a tremendously clean skinned bull with complete smoothness of body. With the head and neck extension as he has his progeny should slip out.</p>
75	QRFQ498	<p>As most would read on paper we are reported lower than most for IMF. It has been pleasing to get so much individual carcass feedback with hundreds of performance recorded animals now evaluated at a carcass standpoint. This lot's grandam, Raff Doris G387, was processed in May after failing to get in calf following stillborn twins. With Rib and Rump fats of 9/19mm and a massive carcass weight of 534kgs she went a MARBLE SCORE 6 - her EBV placed her in the worst 78% for this trait. Q498 is a strong boned and muscular individual. He has loads of real performance with a big hindquarter expression and extreme body width.</p>

76	QRFQ502	<p>Be sure to note that this bulls dam is a full sister to Hoff Limited Editions mother being still active within herd here and sound as a bell at 13 years of age. Q502 is a solid beef bull. Red meat is what we get paid for and he has plenty of it. He has a nice tidy underline with extra jump muscle expression. Pedigrees like this are considered invaluable by us as they are well proven having stood the test of time - they ooze with structural integrity.</p>
77	QRFQ505	<p>Had trouble with DNA records on his dams side from a questionable result many years ago that was overlooked hence this lot not listing a dam pedigree. Nevertheless his dam has been a prolific breeder with 10 calves recorded for a 377 day calving interval. Q505 showcases softness of body at its best. Not only is he wide based but is wide topped also. He has that wonderful traditional head with muzzle strength.</p>
78	QRFQ509	<p>A gentle reminder to the science enthusiasts that you will not have any more calving trouble, if any, by using bulls with a double digit birth weight EBV if the bulls shape is right. The industry has been brainwashed into a belief based from an assumption. Why would we produce them if this was true? Dam has 6 calves recorded for a 360 day calving interval - none assisted. Have a look at the front end profile and head carriage of Q509. How many below breed average birth weight bulls do you see that can't lift their heads above their shoulder blades - I know which would cause more trouble.</p>

79	QRFQ511	<p>This lot has plenty of muscle recording a very solid 123sq cm Eye Muscle Area. His sire, Jovial J350, has bred some magnificent cattle for us and a bull we will certainly go back to in several years time through AI. His dam is heavily influenced by Hoff Limited Edition as Raff Dakota D85 is a three quarter brother to him also. Q511 is an uncomplicated beef bull. Not extreme in any one trait but a bull free moving in structure with a tidy underline.</p>
80	QRFQ513	<p>His dam would be one of the most docile females in the herd - nothing phases her. Her sire, ONeills Prime Star 80, is certainly considered by us to be one of the better breeding bulls out of the ONeills program. Her dam, Blackbird E305, bred Raff Hercules H411 who was the Grand Champion Bull at Beef Australia 2015 where he went on to be the 3rd placed Interbreed Bull. Q513 has loads of breeding potency. He is another well made Jovial son with good muscle and body shape with well hooded eyes.</p>
81	QRFQ515	<p>Born unassisted from a easy doing and moderate framed female whose dam, Bulliac Doris V12, was purchased for her pedigree makeup, individual phenotype and her breeding ability. This Lethal Weapon son will mature into a rugged and large statured individual. Q515 is a later maturing type and a bull that will cover territory with ease.</p>

82	QRFQ521	<p>This is the last lot of the spring born bull group. Whilst a solid performer in actual performance there is no doubting this bull will breed well beyond himself. His dam is a beautiful breeding cow having produced in herd stud sire Raff Marshall M82. She did have another cracking son destined for usage but the King Island Tiger snake got to him first. Q521 should prove highly fertile recording one of the higher scrotal measurements. He shows topline strength with head carriage.</p>
83	QRFR1	<p>The first of the autumn born bull group. Be sure to only compare his raw data information with his contemporary group through to lot 139. He is a rugged type with plenty of frame size gaining 1.37kg/day and weighing 778kg at a little under 18 months. His maternal grandam was a really good looking and productive cow we purchased from Bulliac. R1 is a strong made bull with a nice tight sheath who sits nicely on his pasterns with a good head type and strength of spine.</p>
84	QRFR16	<p>For a Lethal Weapon son this lot bucks the trend expressing a little more moderate frame size when compared to his brothers. Of interest, his maternal grandam produced in herd and massive performance stud sire Raff Franco F153. R16 is a super smooth fronted bull with tremendous neck extension, overall length and body smoothness. This bull shows a great skin type and is a sire that would work so well on gutty and low yielding type females.</p>

85	QRFR20	<p>The first son of a sire we sold when just 12 months of age - several years later we got him back for in herd use here. Be sure to note that the dam of Stewie L62 is also the dam of Raff Jovial J350. R20 has more capacity and spring of rib when compared to the previous lot. He has a good testi set with excellent overall balance. Again this is a bull with a nice presence with eye appeal.</p>
86	QRFR21	<p>Of interest the maternal grandam, Raff Duchess L99, sells as lot 13. She sells with an absolutely stunning heifer at foot that I know will interest many. This lot is an extremely easy doing bull ranking as the number one bull for fat depth. His maternal cow lines are moderate types . R21 is a high quality bull in appearance with that visual softness and natural fleshing. He is good headed with extra looseness of skin. A must go to sire if you want to add softness.</p>
87	QRFR28	<p>Cows Raff Blackbird F14 and Raff Blackbird F60 within this pedigree are embryo flush sisters so the inherent predictability that comes with them certainly adds to this lots breeding potency. His dam has 3 calves with a 349 day calving interval. R28 will produce low wastage types as he is wide based both in stance and topline and visually a high yielding type. He tracks out well and one that should prove a tough and no nonsense type.</p>

88	QRFR40	<p>A very solid all round performer packaged in a moderate frame. His fat scans were some of the highest with his IMF% also impressive. His dam has had 4 calves with a calving interval of 361 days. R40 expresses great strength of spine with topline width and a big hindquarter expression. He shows an excellent coat type and one that is considered a true beef bull from tip to toe. For his muscle pattern he still has good carriage.</p>
89	QRFR42	<p>This is a very strong performance bull. His maternal line is stacked with cows that have extra frame and length - particularly when compared to the current mainstream cow size. If genetics like this can meet target weights at a younger age and be turned off earlier because of their inherent growth ability one must then ask which animal is truly more efficient. R42 is a big, robust and powerful made bull with extra looseness of skin. He will be impressive when mature.</p>
90	QRFR62	<p>Based from pedigree this lot is one that we had shortlisted for within herd use on heifers. His dam is easily one of our best Stewie daughters that is big in capacity with an attractive head with strong muzzle and big ears. Of note her dam, Raff Blackbird H397, is a full genetic sister to Raff Hercules H411 - a sire that has seen international use. R62 does carry himself a little better than the video shows. He should prove one tough calf getting individual.</p>

91	QRFR63	<p>This is a lot with improved paper performance for those that are chasing it. There is loads of muscle in his topline recording the equal second largest Eye Muscle Area at scanning - 117sq cm when just 17 months. He also had impressive weight gains, fat depths and IMF%. Be sure to note that all of the lots raw data is available in our sale catalogue and as a stand alone supplementary sheet. R63 has great capacity and extra spring of rib with nice head carriage.</p>
92	QRFR77	<p>Even more red meat over this bulls topline when compared to the previous lot scanning the largest EMA within his contemporary group of 57 autumn bulls at 118sq cm. This is not surprising when noting that he is double bred to Hoff Moriah in the bottom right corner of his pedigree. His sire, Neptune N4, also had heaps of muscle definition. R77 is a young bull just full of beef with both topline width and strength. For a thick bull he still has smoothness of shoulder and smoothness of body.</p>
93	QRFR80	<p>This has to be considered the go to heifer bull of the sale. We don't intentionally use true heifer bulls on our young females as we believe that there is a progressive diminishing effect of animal size and backend shape. It's okay for a generation or two but beyond that and you continue to stack small on small then it becomes obvious that you will run into trouble. R80 tracks out effortlessly and showcases extreme smoothness of body and shoulder set.</p>

97	QRFR82	<p>There is some natural weight gaining ability in this bull gaining 1.41kg/day whole of life. Big in frame and big in weight and uniquely with even fat distribution on both Rib and Rump. Loads of genetic diversity with genetics from Denmark, United States, United Kingdom, New Zealand and Australia represented. He is a little lame in the video so be of the mindset that if he makes the sale then he has recovered. R82 is a very long and very proud bull with a nice tight sheath and high yielding body type.</p>
95	QRFR83	<p>All four of the Hoff Scotch Cap cows we purchased in 2006 are represented within this bulls pedigree along with the best of our Doris line. No matter how good a stud sire is, AI or walking, we won't use him if his pedigree contains maternal lines that we don't like. This lots pedigree is superb. R83 has loads of capacity and extra girth. He is very attractive with natural softness and depth.</p>
96	QRFR115	<p>Be sure to note that Raff Levi L165 is an imported embryo brother to used sire Raff Lethal Weapon L156. Also, if you like pedigrees, be sure to go back a generation and look at the strong Burnette cows in the maternal background. This bull had the equal highest Rib fat scan and second highest for Rump fat. R115 is deep chested and another long bodied bull with tremendous hip to pin length. Bulls like this will produce easy care daughters and big framed bullocks that will weigh heavy.</p>

97	QRFR125	As mentioned earlier this bulls Duchess maternal cow line is well regarded for their structural integrity and longevity. Within his raw data information he had a good IMF% scan. R125 has good testicle shape with extra jump muscle expression. He has the genetic capability to breed well beyond himself.
98	QRFR132	One of only a handful of Raff Prince P23 sons to sell. He is a massive scrotal bull recording a measurement of 48cm at just under 17 months. He is a bull that combines paper performance with individual raw performance however I must remind breeders that his birthweight EBV would be no more than that of a breed average Euro bull when adjusted so don't discount him. Look at the body shape and style in R132. He has softness of fleshing with and lovely subtle skin and a sires outlook.
99	QRFR148	Of interest, the maternal great grandam Raff Doris D160 is selling as lot 14 within the Female stage of this sale. She is a magnificent and well proven cow with wonderful capacity and volume for a cow of her age. This bull has been a good weight gainer with a weight of 702 kgs when a little over 16 1/2 months gaining 1.31kg/day. R148 has great strength of spine behind his shoulder plate and a clean skin type. I reckon he could cover some territory with ease.

100	QRFR149	<p>This is the first son of United Kingdom AI sire Eric to sell. He is another strong performer gaining even more weight per day than the previous lot. He is of large stature but blends softness well for his big frame being one of the higher scanning Rump fat scans within his group. His dam has 4 calves recorded for a 367 day calving interval. R149 is a soft fleshing type, so much like his mother, with good depth.</p>
101	QRFR152	<p>Remember that his sire Neptune N4 was the heaviest weighing bull in his contemporary group at weaning weighing over 500 kilograms - these genetics will produce progeny with weight for age. R152 is a very free moving and athletic young sire with the body type best matched to those that need to improve underlines. Again he is very smooth fronted with good head carriage.</p>
102	QRFR155	<p>This is a lot that I well expect will draw the attention of many. He is the first son of the aptly named Powerhouse sire introduced by AI from the United Kingdom. R155 is a massive performance individual gaining 1.45kg/day from birth through to scanning date when physically weighing 770kg at 16 1/2 months. His attractive and silky skinned dam has 4 progeny recorded for a 362 day calving interval. R155 is big in frame, big in weight and big in scrotal. R155 has a good skin type and very good mobility for such a heavy weighing individual.</p>

103	QRFR158	<p>Another well bred young bull with four countries represented in his pedigree. Individually he has been a very solid performer with his Eye Muscle Area the 5th largest within his group. Efficiency, Carcase Weight and Yield are major profit drivers however they do have a negative correlation to fat and IMF. R158 has extra hindquarter expression and loads of thickness from behind. This is a very good beef bull.</p>
104	QRFR160	<p>Lots to like in this bull as he is a solid performer both individually at a raw performance level and phenotypically by eye. There are some really nicely made cows within his pedigree. This is another bull whose daughters should be considered for replacements. R160 has loads of capacity and heart room with forearm strength. You can see that he still has looseness of skin so he has got plenty of room to developed yet. Great bone in this bull also.</p>
105	QRFR161	<p>One of the go to bulls for accessing genetics that will capture increased market interest. He was the equal highest weight for age bull within his group of autumn born R bulls. With a daily gain of 1.46kg/day from birth he combined the unique ability to also record the 2nd highest IMF% scan. Rarely do we see high weight gainers with carcase quality. Of interest, his maternal grandam sells as lot 11. She was a direct embryo import from one of the four Hoff Scotch Cap females we purchased. This is a cracking individual and should not be overlooked. R161 oozes style with length of body and smoothness of front. He is a magnificent individual.</p>

106	QRFR171	Another high performing Stewie L62 son that will be a efficient converter of feed into kilos of beef. Be sure to note that maternal sire Raff Levi L165 is a United Kingdom embryo import full brother to Raff Lethal Weapon L156. Both sires passed on their huge yield and carcass weight qualities. R171 has the inherent length of his father with nice docility and mobility.
107	QRFR175	This lot is a huge weight gaining sire being equal heaviest ADG bull in the group combined with a big scrotal. His dam is a large framed and very attractive female. R175 is a magnificent individual and one that is hard to fault. He has a great muscle pattern and the presence of a true sire. We intentionally bought back his sire Stewie L62, after selling him as a yearling, for the specific genetic matings to females containing United Kingdom genetics. The resulting progeny have exceeded our expectations. This lot is a cracker.
108	QRFR176	Be well aware to note that these N spring born dams were intentionally carried over to calve in the autumn as we will be transitioning to a mostly early autumn calving moving forward. This bull is very solid in performance gaining at ease with close to an ideal finishing ability. Look at the body of beef in this lot. R176 has good bone structure yet maintains smoothness of body. He may look a little shorter than others but I think his depth makes it a little deceptive.

109	QRFR178	<p>The first son of United Kingdom AI sire Jumbo to sell. Have a look at the thickness in this lot. Note that the maternal grandam, Lady Durham D362, is a full sister to Hoff Scotch Cap embryo import and past stud sire Raff Dictator D364. From birth this lot has shown more thickness than most. R178 has developed an expressive jump muscle with loads of red meat hanging from every corner. British beef bulls with bodies like this are getting hard to find.</p>
110	QRFR184	<p>Found alone in a paddock of calving N females we fostered this lot onto another cow as he must have been a twin. We could not verify who his dam was from files on record but be rest assured he is out of a stud cow here at Raff Angus. Look at the clean skin type on him and the tremendous length of body. For such a long bull R184 has very good spine strength with smoothness. All progeny by his UK sire will produce offspring of high yielding types.</p>
111	QRFR189	<p>Double bred to my once in a life time cow Raff Blackbird F14. This lot has been a more moderate performer however has still been gaining 1.10kg per day for his whole of life. His maternal grandam was shown at the Junior Angus Heifer Show when in Toowoomba many years ago. R189 is a free moving individual with great head carriage and neck extension. His head type is very similar to his sires.</p>

112	QRFR199	Withdrawn.
113	QRFR208	<p>This is a very well bred young sire. His Maternal sire, Raff Ego E266, is a flush brother to Blackbird F14 - the dam of the phenomenal female selling as lot 4. Raff Blackbird E107 is a flush sister to Hoff embryo import and in herd stud sire Raff Explosive E108. Raff Doris L136 is a flush brother to stud sire Lieutenant L140. Raff Hercules H411 has seen both in herd and international usage while also being the Beef Australia Grand Champion Angus Bull in 2015. R208 himself is a standout. He was the equal 5th highest daily gaining bull at 1.39kg/day. Further he was the highest IMF% scanning bull within his contemporary group of 57 autumn bulls at 7.4%. This is a high quality bull with good looks and phenomenal performance.</p>
114	QRFR212	<p>A strong genetic match. His maternal cow line features show champions during our three year take our cattle to the people campaign. Raff Empire E269 is the feature who won 11 Interbreed Animal of the Show Titles whilst Raff Burnette D35 also achieving success at the Adelaide Royal Show. R212 is a muscular and, on appearance, a tough individual. Again for a bull with so much muscle it was pleasing to see him record the 3rd highest IMF% scan of 7.0 within his group. Dam has 3 calves recorded for a 345 day interval.</p>

115	QRFR214	<p>This lot is of pure United Kingdom genetics. His dam was imported by us as an embryo and is a full sister to sires Raff Lethal Weapon L156 and Raff Levi L165. This lots sire was imported by us as an AI sire. This lots dam is a massive individual with extreme back end pin width combined with actual length from hip to pin. She weighs heavy and has a slick hair type. This lots sire was specifically introduced for his outstanding weight bearing qualities and structural integrity. R214 himself is very docile when lovely big ears and heaps of muscle. If you want a sire with genetic diversity then this is the lot.</p>
116	QRFR215	<p>Another genetically varied bull and a three quarter brother to the previous lot. We were fortunate to access a flush from the magnificent Granite Ridge Dream D65 cow that resulted in some tremendous breeding females and high selling bulls. Take the time to look back into her pedigree as there are some true greats of the breed. R215 is a big framed and big scrotal bull. Dam has had 4 calves for a 371 day calving interval.</p>
117	QRFR217	<p>The lots mother is a stout made and highly fertile cow with an excellent udder and quiet nature. She stems from the magnificent Jestress V37 cow whom we were lucky enough to get several flushes out of before her retirement. This bulls dam has had 4 calves for a 359 day calving interval. R217 himself recorded the equal highest EMA measurement of 118sq cm at just 16 1/2 months. He also has a very strong weight for age uniquely combined with a strong IMF% scan of 6.3.</p>

118	QRFR226	<p>It must be noted that the dam of this bull is an embryo full sister to used stud sire Raff Dallas D216. He was a massive framed and heavy weighing sire that produced proud and upstanding progeny. This lot combines some of the well proven genetics from our Hoff Scotch Cap investment with fresh genetics from the United Kingdom. R226 is a very good beef bull with mobility and most importantly genetic variance to mainstream. Well worth a look.</p>
119	QRFR228	<p>On paper this is a pedigree that we could have well used as it combines the massive early weight for age of his sire with volume and softness from his dam. Blackbird N138 certainly is one of the more attractive Stewie D19 daughters here on farm. The most attractive is selling as lot 8 within the females selling at Walwa. R228 is an athletic young bull that certainly can cover some ground with ease. He has to be considered suitable for heifers.</p>
120	QRFR230	<p>Some really appealing types on phenotype in this lots maternal line. Raff Burnette B126 was one such female. She was so pretty and feminine having been awarded the Sydney Royal Show Grand Champion Female during her show career. The dam of this lot has 4 calves recorded for a 364 day calving interval. R230 is a smoothly made son of our new United Kingdom AI sire, Eric, who has the genetic potency to breed on.</p>

121	QRFR236	<p>Another of only a few United Kingdom AI sire Powerhouse sons. This bull is a beauty. His maternal line contains a number of large framed and heavy weighing types. Look at the capacity and girth in this bull. R236 weighed over 700 kilograms when just 16 1/2 months with a daily gain of 1.33kg/day. You can just see in the bull himself that he will mature into a powerful individual. He has a strong head and muzzle with forearm strength and body shape. He is a very good bull.</p>
122	QRFR237	<p>Another son of the fresh United Kingdom genetics. Take the time to go back to the reference sire pages and look at the body shape of this lots sire Jumbo. He has an excellent beef body and an excellent head with muzzle strength. This lots dam has 7 calves recorded for a 368 day calving interval. She has been a very good breeder. R237 himself has muscle definition with looseness of skin. He will mature into a large framed, deep sided and heavy weighing bull. He already weighs 720kg at 16 1/2 months.</p>
123	QRFR246	<p>There is some body shape in the maternal lines of this lot. This is another Jumbo son and has himself that squareness of both topline and stance as his mother and grandmother. These Jumbo bulls are all thickly made with real muscle definition. There is no fear of them being extreme in frame size however they have natural constitution and the traditional head shape and bone structure of old.</p>

124	QRFR249	<p>On my first viewing of this bulls video I had to go straight to the pedigree to see who he was - what a cracker. We have never been afraid of taking one step back in time and use old genetics of the past. This lots dam is stacked full of successful and well proven sires from decades ago. Join them to absolute powerhouses of the modern era, when you can find them, and look what can be created. R249 is a tremendous beef bull.</p>
125	QRFR250	<p>His dam is a long and clean skinned female with extra mobility. This lots grandam, Burnette E116, was a phenotypically ideal show cow during our 2010-2012 show campaign. It should also be noted that this same cow is the direct mother off Raff Burnette L17 who sells as lot 7 - she is a cow with enormous capacity. R250 is a solid performing beef bull in the paddock.</p>
126	QRFR268	<p>The dam of this bull is as long and upstanding a female as you could want for. She is heavy in weight with tremendous neck extension and shape. The sire of this lot was a stand out performance bull within his group with extra weight for age. Both of these two animals had excellent coat and skin types. R268 himself is an athletic individual with a free moving body flow with good head carriage and shape.</p>

127	QRFR292	<p>Loads of genetic potency within this lot. Three corners of his pedigree are United Kingdom genetics. His dam has had 5 calves for a 372 day calving interval. Two of these have become stud sires with one of them selling to Wallangra Angus at Wandoan for \$25,000 - the other is on farm. Dam, Dream L174, is a large framed female and of superb docility. R292 has performance to boot. He recorded the largest frame score within his group and is the only bull in the complete offering to have identical fat depths on both his Rib and Rump. He also recorded the 5th highest daily gain at 1.39kg/day. His progeny will weigh heavy and be very high yielding.</p>
128	QRFR298	<p>I have commented on the Duchess line for their longevity and structural integrity however should also note that the Lady Durham maternal line excels for this also. The original Lady Durham was a 13 year old cow when we purchased her at the Hoff Scotch Cap dispersion sale. Two years later she was on-sold and still ideally sound. Have a look at the profile, presence and capacity of this lot. At just 16 months of age he has outstanding weight for age. Keep his daughters and grow his male progeny out to big bullocks. Both will impress.</p>
129	QRFR306	<p>Go back one more maternal pedigree line and you will see the infamous Forres Burnette A22. This cow dominated the show scene in the 80's and was one of the greatest breeding females of her era. Her influence is still scene. R306 is a moderate framed and thick set bull with complete squareness of body. He is a free moving young sire with the performance that suggests he would be suitable for heifers.</p>

130	QRFR314	Major sons are very much all of a kind in body type. His dam, Lady Durham F94, is a full sister to past stud sire and Hoff embryo import Raff Emperor E106. This lot has very good forearm strength. Be sure to take the time to look at his raw data information as he combines carcass quality with excellent weight for age. He definitely has to be an efficient converter of feed to red meat. Dam has recorded 3 calves for a 351 day calving interval.
131	QRFR317	Look at the body length, smoothness of skin and coat type on this lot. We have never been one for selection of extreme fat as it often creates cattle with fat briskets and fat lumps over the pins. Instead we have looked at doing ability with smoothness. Whilst this bull recorded the equal second highest Rump fat scan he maintains that smooth finish of whole body not in lumpy deposits. Note maternal cow Raff Doris S128 retired when over 20 years of age.
132	QRFR318	His dam has already had 5 calves in her first three years - two sets of twins. She is a beautifully made female just like her dam whose genetics have been used through grandsons within herd. R329 is a neat and tidy bull with a strong top and tidy underline.

133	QRFR329	<p>Have to mention the maternal grandam Burnette F73. She is a magnificent maternal cow that, whilst not extreme in frame size, is of ideal body shape with a magnificent shoulder set, neck extension and massive milking ability. She has had 9 calves for a 385 day calving interval. R329 is a super free moving young bull. Remember he is just 16 months. His style and extreme head carriage with neck extension do act as a deception to his body depth. When mature he will be a bull of substance with good weight.</p>
134	QRFR342	<p>Loads of fertility in this lot. His dam has 7 calves recorded for a 367 day calving interval with this bull himself big in scrotal size. His dam has been a great breeder with her recent daughter, Burnette P36, one of the stand out females of her year. Her Q son sold at our Autumn sale as one of the high sellers going to Charles and Cass Kimpton at Glenthompson Victoria - this bull was the heaviest in the sale. R342 himself recorded the second largest EMA scan of 118sq cm and is a bull with good muscle definition, top line width and body shape.</p>
135	QRFR364	<p>It must be noted that maternal grandam is selling as lot 28 - she is magnificent. This lots dam is one of the most placid natured well made females within her year drop. The pedigrees are stacked full of longevity with structural integrity traits. Have a look at the body shape in this young calf. Long and smooth fronted with good depth and softness. In fact his Rump fat scan was the equal second highest. Remember he is just a little over 15 months. A great bull that will breed very good types.</p>

136	QRFR365	<p>As mentioned earlier those that are reported as being efficient converters, have high Retail Beef Yields and big Carcass Weights are negatively reported for birth weight and fat on paper. Just have a look at the smoothness of body and coverage on this lot and the front end profile. There is no question that his progeny will be born easily and again no doubting that his progeny will have enough finishing ability and they will be highly profitable. This is another really good Angus Beef Bull.</p>
137	QRFR366	<p>Could very much mirror the same comments as the previous lot. Again note that this lots grandam is another big capacity female selling as lot 14, Raff Doris D160. She is from the same cow that produced Raff Empire E269. The dam of R366 is another cracking Jovial J350 daughter who we hope to one day use a sire from. This sale lot tracks out really well and displays an expressive jump muscle. He has good frame with solid performance and is considered another cracking young bull in the sale.</p>
138	QRFR369	<p>Have a look at the capacity and spring of rib in this lot - plenty of heart room in this bull. His dam is a big brood cow that always produces the goods. She stands on great feet and legs with an excellent udder shape with ideal teat size. This is the first son that she has produced. He has been gaining over 1.3kg/day from birth with a really good spread of performance throughout.</p>

139	QRFR372	<p>If you want to produce highly efficient animals with big weight gains, big yields with big carcass weights then this is a must go to sire. It's nice to have a cracker selling as the last sale lot. Again his grandam and prolific producing matron, Raff Doris F172, sells as lot 29. She has produced two stud sires and is the dam of standout spring born selling as lot 43. At just 15 months R369 weighed 642 kilograms. He has extra length of hip to pin with a strong bone structure.</p>
